

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: North Pole State: AK

ZIP: 99705 Country: USA

Latitude: N64.36 Longitude: W147.36

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 05/30/2019 Local Time: 1900
mm/dd/yyyy

Time Zone: Alaska

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N9833M

Manufacturer: Maule

Model: M4-210C

Serial Number: 1017C

Year of Manufacture: 1966

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

- ☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 2100 lbs

Weight at Time of Accident/Incident: 1800 lbs

Number of Seats: 4 Flight Crew Seats: 1

Cabin Crew Seats: N/A Passenger Seats: 3

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

☐ Minor ☐ Destroyed
 ☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Prop strike, wing struts bent, tail bent, some of the fabric on the top is ripped, engine mount cracked

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I took off from 95Z with the intention of landing at 2AK1. The winds were from the east at 95Z and VFR. Enroute to 2AK1 was uneventful. I had checked comments section in foreflight and noted the runway was 1500x50. I circled the airport (2AK1) three times looking for hazards. I noted the runway width was smaller than 50', but I didn't realize there were alders 2-3' high surrounding the clear patch of dirt. The clear patch of dirt ended up only being 10-12' wide and it's about 50' between the trees. There was nothing unusual about the approach. I noted that I floated slightly off of the center of runway to the west. It may have been because of the winds being slightly from the east. I touched down with the left wheel in the alders. After 1-2", I felt the airplane rapidly nose over. I held full back stick, but the plane flipped over onto it's back. I did not apply throttle as the airplane nosed over. I noticed there were alders branches wrapped all around the left wheel and the wheel was locked up. I believe it was the alders that caused the wheel to freeze up. I removed the alders and the wheel moved fine.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I learned a couple of good points. First, I had been practicing touching down precisely length-wise at my home airport. I paid attention to my left/right of the centerline of the runway, but I didn't put the attention that it needed to be as compared to my touchdown point. You have to hit on centerline and on your intended landing distance exactly at unimproved airports.

Second lesson I learned was estimating hazards on the airport environment. After getting out of the airplane and surveying the runway, I would have absolutely not attempted the landing, but I couldn't judge the alders from the air. I thought it was just grass/weeds around the clear area. I flew by the runway three times checking the distance and looking for obstacles, but I didn't see anything. I'm not sure the exact instructional fix for this error. But I will go practice looking at runways from the air and comparing them to how they look while on the ground, looking for small trees, bigger rocks, etc... I don't have a good way of estimating hazards from the air.

Third lesson I learned was trust, but verify the information in foreflight. I used foreflight to look at comments about the airfield. I could not find 2AK1 in the AFD. If the comments stated that the clear area was only 10' wide I would have not attempted the landing. The comments did state about 3'-8' high shrubs on the runway. But again, I assumed that was outside of the 50' area designated as the runway. This goes back to my second lesson learned was estimating hazards on the airport environment. I even talked to a pilot who had been to Blair lakes before. I had thought I did my due diligence before landing, but there's more I could have done.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
