Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

When vertical stabilizer struck runway, top 4-5" was crushed. The crane operator caused further buckling of fuselage behind aft cargo door bulkhead and stress fractures on empanage when the aircraft was turned back over. 3-4" of prop splintered. Partial nose cowling damage. Plexiglass cockpit window broken. Upper wings VG's destroyed. Fuel vents crushed. Seven right-wing ribs cracked.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After an hour of flying in the Lake Tahoe Airport pattern to include numerous touch and go's, the last landing was to a full stop. With the high speed taxi way several hundred feet ahead and to the right of runway 18, I applied light brakes to make the high speed taxi way at approx. 30 knots. Although the tail was on the ground, the tail came off the ground with light braking because of the forward CG and I tried to get off the rudder pedals. With my seat belt not fully tightened, I slid forward on the seat about an inch, which resulted in more braking and the tail rose further which caused the propeller to impact the runway at approx. 10-15 knots. Then the aircraft continued over the top, with the tail-dragger ending upside down. I turned everything off, including the fuel, released my seat belt, opened the door, and exited the aircraft with no injuries.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Do not use brakes on a tail-dragger aircraft with forward CG except for engine run-up and parking in the chocks.
