FOR NTSB USE ONLY

NTSB Accident/Incident No. GAA19CA332	Reviewed by NTSB Regional Office GAAID	Name of Investigator HICKS	Date Report Received 24JUN2019
--	---	-------------------------------	-----------------------------------

The incident occurred on 08 Jun 19, around 1625L. The plane was occupied by the Pilot, one passenger (wife), and two small dogs in the backseat. The flight was the first flight in the aircraft by the passenger, and the Pilot had briefed the passenger in normal operations and emergency procedures. Weather was CAVOK with light winds. Preflight checks revealed no significant issues with the aircraft, although the engine was slightly low on oil and half a quart was added. After the passengers were loaded and the engine was started, the aircraft was taxied to the runway and the engine runup checks were performed. All checklists were completed, and the plane back-taxied on the runway for a departure off of runway 17. No traffic was noted except for an aircraft that had departed several minutes prior. Power was applied for takeoff, and just after initial acceleration, the aircraft pitched up without sufficient airspeed for flight. The pilot applied forward pressure on the controls to attempt to lower the nose following the immediate and premature pitchup and climb. The aircraft stalled, and the right wing dropped, scraping the runway, and immediately following this the left wing dropped and did the same. The aircraft veered to the left, and the nose impacted in the grass and the aircraft came to a stop in the grass. The aircraft only climbed to approx 10 feet above the runway on the initial pitchup, and the airspeed never reached a safe climb speed.

The aircraft's engine caught fire immediately and the pilot opened the door and initiated an egress for his passenger and the dogs. A local pilot approached with an extinguisher and the fire was doused. The pilot and the passenger left the scene immediately following this for the hospital for examination, where no significant injuries were found.

The pilot had checked the trim setting twice prior to applying power for takeoff. Due to Observer/Expectation bias error, he did not see that the trim set to a significant nose up attitude and not to the correct Takeoff Trim setting.
