NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Date of Incident: 16 June 2019

Mishap Location: Minto Flats Approximately 25 miles west of Fairbanks

Mishap Aircraft 2765A

Mishap Instructor: Mark Burley # [REDACTED] (MIP)

Mishap Student: Jeremy Wilson (MSP)

Mishap Narrative:

Mishap sortie was the second instructional sortie for the MSP. The mishap sortie was briefed to be flown from Fairbanks (PAFA) to the Minto Lakes area. Items briefed were a review of normal procedures, glassy water takeoffs and landings, rough water takeoff and landings and confined space procedures. Preflight was completed and sortie departed approximately 1415L. Preflight weather and NOTAMS were checked using Foreflight. Weather was VMC with light winds, Takeoff and departure, using TRSA services was normal. Flight to the Minto Lakes area was bumpy, but uneventful. The first landing was a normal landing. The MSP requested that we float around the lake for a few minutes as he had become airsick on the flight. After approximately 10 minutes, the MSP said he was feeling better and the training ride resumed. The next two landings were glassy water landings with small inputs from the MIP, followed by two rough water landings with inputs from the MIP. The mishap flight then departed to the west approximately 3 miles to practice confined space landings on a slough. The MIP pilot showed the MSP where he wanted him to land. The landing was executed to a step taxi to the far end of the slough, with small instructor inputs. The aircraft was turned around on the slough using displacement taxi. Pre-takeoff checks were completed and the MSP began the takeoff. The beginning of the takeoff was normal. The aircraft rolled onto the "step" and began accelerating. Just prior to liftoff the MSP made a rather abrupt attempt to rotate the aircraft out of the water, prior to flying speed, aggressively digging the heels of the floats into the water slowing the mishap aircraft significantly. The MIP took control of the aircraft and pushed the aircraft back onto the step. Shortly after that point the instructor decided that there was insufficient water remaining to make a successful takeoff. The MIP retarded the throttle to idle and aborted the takeoff. The mishap aircraft contacted land just as it was coming off the step, sliding through the wet grass until it hit a small mound with the left float. This lifted up the left wing enough for the right wingtip to contract the ground damaging the right wing. The aircraft was shut down and secured. No injuries were sustained to MSP or MIP.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

As the Flight School Operator of this aircraft, I will re-promote the policy that the instructors need to leave a LOT of room for error when working with students. I will also increase the re-currency requirements to include all types of landings and take-offs, plus a ground session on training techniques and safety.
