Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

ELT did not activate because it was a slow speed accident while aborting takeoff. Left gear collapsed. Right gear bent. Engine mount broken both sides where gear connected. Left firewall near gear damaged. Left aileron outboard hinge damaged. Puncture to underside of left wing (no damage to fuel tanks). Bent pitot tube left wing. Left wheel pant destroyed (unknown internal damage). Prop strike.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Occurrence Date: 14 Jun 19

Location: CJR

Approximate time of occurrence: 11:05

Individuals on board: 1 (self)

Phase of Flight: Initial Takeoff

I had landed at CJR for fuel. 20 minutes later I was ready for takeoff on Runway 4. I made my radio call for initial takeoff and proceeded onto the runway. I added power and began the takeoff roll. Just as I started rolling a large wind gust (approx. direct cross) violently moved my aircraft. I added more crosswind controls and then the gust died down. This caused a quick fishtail scenario. I immediately decided to abort the takeoff. I reduced power and applied braking. During braking the aircraft began turning to the right (away from the wind) I attempted to apply appropriate braking and controls to stop the turn. The left wing settled to the ground during the turn and, slightly thereafter, the aircraft came to a stop at the side of the runway. From engine run-up to stop was approximately 200 feet.

After coming to a stop I made a radio call alerting area aircraft (there was none in the pattern) of my location on the runway. After exiting the aircraft I called the FBO for assistance.

No engine noises or other noises were noted at the time.

Evasive actions attempted: aborted takeoff after strong wind gust

The airport has a large tree line on the left side where the wind was coming from and caused mechanical turbulence. To the right of the runway there is more open space. My aircraft came to a stop with the nose of the aircraft approximately 4 feet off the right side runway edge.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

There are a number of things in this report that I needed to leave blank. Here are the explanations.

1. Prop Model: I cannot find the specific model.
2. ELT Manufacturer and serial number: I have requested someone to retrieve this information from the aircraft, but I don't have it yet.
3. ELT did not go off because it was slow speed and low impact.
4. Temp and Dewpoint information: I do not recall the exact numbers.
5. SIGMETS/AIRMETS/PIREPS: I do not recall the exact information.
6. Instructor time (night and instrument): we don't log this in the Air Force so I would be guessing to put numbers here.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
