Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

After the incident there was 3" of top of rudder bent, the windshield had a 4" crack at the top right corner, and the prop was damaged. The extraction created a fair amount of additional damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

This was one of the test flights for our 40 hour experimental fly off, as well as a flight to get promotional pictures and video shots of the Four Place Super cub for my job. I departed Birchwood airport (PABV) at approx 5:15pm. The winds were very light with no turbulence so I flew north along the west side of the Chugach mountains, a short ways into a couple of the valleys, and then cut across the Knik valley to Friday Creek. I climbed through the Friday Creek valley and initially took the east fork. I have spent a considerable amount of time in the Friday creek area and have previously landed in all of the land-able areas of the valley numerous times before to explore, and to bird hunt. I did two landings in that valley, and then checked out a couple other landing spots to see if I could get some pictures and video on the ground. I determined that there was a slight quartering tailwind that would make a landing slightly questionable for my comfort level in this new plane. I then headed up the west fork instead as the wind was blowing up the valley in line with the landing areas up that valley. I made two passes to check the area out and make sure there were no hidden or new rocks, sticks etc. I then made a long stabilized approach and touched down at approx 30 mph. It was a smooth touchdown, but almost immediately as I touched down the tail lunged upwards significantly, The tires skipped once and when they touched the second time it felt like they were locked up and the cub nosed over. The landing area was about 7-800' long, fairly smooth, flat and mostly sand and gravel with grass along the edges. I am not sure if the brakes were warm and having a heat dragging of the sealed brake system, or if my feet were possibly slightly too high on the rudder pedals and putting pressure on them as I worked the rudder for landing.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

In hindsight I feel I probably should have flown more hours to longer airstrips that would not require the use of much braking until I more fully acclimated myself to the toe brake setup in this plane and to sort out any braking pressure issues a little more thoroughly. I felt that the plane was functioning very well and was pretty easy to fly, and I believe my overconfidence in it was likely a contributing factor.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I do not feel there was a mechanical failure of the brakes, but possibly a heat induced dragging of the brakes.
