Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Engine compartment/nose section separated about 1" from the rest of the fuselage, nose gear collapsed, significant propeller damage
Approximately half of the right wing sheared off and right flap pushed through rear plexiglass window
Left main gear and left horizontal stabilizer damaged by taxiway light

Ramp light and light pole destroyed
Hold-short boundary warning light destroyed (West side of A9)

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Student Statement:

I was practicing landings on runway 7L at Deer Valley. I had previously completed 2 touch-and-goes. I was attempting a soft-field landing. When attempting to land, the plane would not touch down and ballooned. I tried to execute a go-around by announcing a go-around and adding throttle. The airplane was not climbing and turned to the left. I believe the crosswind made the aircraft turn to the left. The instructor announced, "my controls" and the airplane continued to turn left and not climb. It bounced once on the ground prior to impacting a light pole on the North Ramp.

Instructor Statement:

The student was practicing a soft-field landing. The landing was nose high, so the student decided to go-around prior to touch down. The airplane would not climb and the airplane turned to the left. I took the controls during the go-around by pitching down, adding full power, and decreasing flaps to 20°. The airplane would still not climb and would not accelerate. The aircraft continued to the left. I tried to maintain control and runway centerline. The plane bounced off the gravel infield between Runway 7L and taxiway Alpha, entered the North ramp, and hit a light pole. The plane turned approximately 180° after impacting the light pole and came to a stop. At the time, I believe the wind was a slight tailwind. The right door of the aircraft would not open, so I exited the aircraft out of the pilot's side (left) door.
