Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Landed in a marsh so no other property damage. Propeller damaged. As well as most surfaces that came in contact with the ground as we skid along the ground.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

My daughter, her friend and myself left LL22 (Brookridge Airport - located in the western suburbs of Chicago) shortly before 9 am Central time on Saturday, June 29th, 2019 with a destination airport KSSI. I filled up the tanks and we had full fuel (90 gallons) when we left. We did pick up flight following shortly after leaving LL22. We were traveling at 7500 ft. for most of the trip and everything was good. When we did get around the Georgian state line, we started to encounter clouds that did require us to maneuver and then ultimate climb to 9500 and then back down and then I believe back up. During this time I was getting a little concerned with the clouds. Between the airspaces and climbing, I ultimately forgot to lean the mixture for the last couple of hours back to the 15 gallons and hours and was burning closer to 20 gallons. The plane has four tanks. 15 gallons on the outboard auxillary tanks and 30 gallons on the inboard. There is a gauge on the plane that shows fuel flow and gallons used. I started on the right in board, used 10 gallons on take off. Then went to left outboard aux and used 14.6 gallons. Then to the right aux and used 14.1 gallons. Then to left inboard and used 26.2 gallons. Then ultimately to the right inboard. Somewhere around 20-30 minutes away from the final destination my daughter mentioned that the fuel gauge was dancing around a bit. That caused a little concern and as I looked around noticed that I left the fuel mixture full rich and was burning 20 gallons and hour. I then leaned it and made the decision to land earlier than planned at the closest airport. That airport was Brunswick Golden Isles (KBQK). When I had the field in site, I informed flight following and radar service was terminated. I contacted BQK of my position and intentions. Shortly after that, the engine started sputtering. I then tried alternate tanks with the fuel pump on. I pitched for best glide at 100 mph and tried the alternate tanks again. At some point I didn't know if the runway was 100% make able and that there were trees in between, I noticed the marsh below me looked like a much better alternative. I then made the decision to attempt to land there and then made a MAYDAY call. As we started to turn north I noticed a creek on our left and one to the north of the landing area. I wanted to get on the ground before that and probably put the plane down a little sooner than needed and could have glided a little longer, but knew that I didn't want to get near that creek. My guess is that we were hitting the reeds for 50 to 100 ft or so maybe longer and all was good until we hit something on our left wing. I am guessing it was a stump in the reeds. When we hit that stump we turned violently 180 degrees and came to a complete stop. Before we took off I did give my daughter who was in the passenger seat a safety briefing on how to open the door in case of an accident. This is what I was taught to do. When we made the turn towards the marsh I asked her to crack the door open and hold it. She did it perfectly. We had our landing gear up. We all had our seat belts on and after a few second of looking around we all said we were ok and took a couple of deep breaths. I then turned off the master switch and fuel pumps and removed the keys. We then got out of the plane and stood on the wings and then called 911. My phone shows that we first called 911 at 2:58 eastern time.

We were on the phone with 911 as they coordinated with the fire department to find us. They did have some problems locating us directly, but ultimately were able to find us. They were trying to get an airboat to our location, but in the end had to call for a helicopter. The coast guard made it out to the location somewhere around 5 pm eastern and the were able to take us to the Brunswick Golden Isles airport. We met with the fire department at the FBO at that airport.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The obvious recommendation is to stop for a fuel stop along the way.

Another would be to obtain an IFR rating. The time and fuel spent trying to stay VFR was fuel that could have been used.

When we turned toward the marsh, the person in the front passenger seat cracked open the door and held onto it. When we came to a stop and I got my bearing, I realized the fuel pump and master switch were still on and I turned those off immediately. At the same time we exited the aircraft in a quick manner. First the front passenger exited, then the rear passenger and then myself. We then stood on the right wing until the Coast Guard arrived.
