

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Milton State: FL

ZIP: 32583 Country: USA

Latitude: _____ Longitude: _____

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 06/25/2019 Local Time: 1745
mm/dd/yyyy

Time Zone: Central

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N5697V

Manufacturer: Piper

Model: PA28-161

Serial Number: 28-7716203

Year of Manufacture: 1977

Amateur-Built: ☐ Yes ☐ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 2325 lbs

Weight at Time of Accident/Incident: _____ lbs

Number of Seats: 4 Flight Crew Seats: 2

Cabin Crew Seats: _____ Passenger Seats: 2

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☒ Normal
☐ Aerobatic
☐ Balloon
☐ Commuter
☐ Transport
☒ Utility

Special

- ☐ Restricted
☐ Limited
☐ Provisional
☐ Special Flight
☐ Experimental
☐ Special Light-Sport
☐ Experimental Light-Sport

☐ Certificate of Authorization or Waiver (COA)
☐ None ☐ Unknown

Landing Gear

(Check all that apply)

☐ Retractable

- ☒ Tricycle ☐ Tailwheel
☐ Amphibian ☐ High Skid
☐ Emergency Float ☐ Skid
☐ Float ☐ Ski
☐ Hull ☐ Ski/Wheel
☐ Other Launch/Recovery System
☐ None ☐ Unknown

Engine Type (Select one)

- ☒ Reciprocating ☐ Liquid Rocket
☐ Turbo Shaft ☐ Solid Rocket
☐ Turbo Prop ☐ Hybrid Rocket
☐ Turbo Jet ☐ None
☐ Turbo Fan ☐ Unknown
☐ Electric

Fuel System Type (Reciprocating)

- ☒ Carburetor ☐ Fuel-Injected

Engine	Engine Manufacturer	Engine Model/Series	Manufacturer's Serial Number	Date of Mfg. mm/dd/yyyy	Rated Power ☐ Horsepower or ☐ lbs of Thrust	Total Time (hours)	Time Since: Inspection (hours)	Overhaul (hours)

Last Inspection Type

- ☐ 100-Hour ☐ Continuous Airworthiness
☐ AAIP ☐ Conditional Inspection
☐ Annual ☐ Unknown

Date Last Inspection: 05/01/2019
mm/dd/yyyy

Airframe Total Time: 4170.35 hrs

hours measured at (Select one)

☐ Last Inspection ☐ Time of Accident/Incident

Type of Maintenance Program (Select one)

- ☐ Annual
☐ Conditional (Amateur-built only)
☐ Manufacturer's Inspection Program
☐ Other Approved Inspection Program (AAIP)
☐ Continuous Airworthiness
☐ Other, specify: _____

Description of Fire Extinguishing System

- ☐ None
☐ Specify: _____

Propeller 1

- ☐ Fixed Pitch
☐ Controllable Pitch
☐ Ground Adjustable

Manufacturer: Sensenich

Model: 74DM6-0-60

Propeller 2

- ☐ Fixed Pitch
☐ Controllable Pitch
☐ Ground Adjustable

Manufacturer: _____

Model: _____

ELT Installed: ☐ Yes ☐ No

If Yes:

ELT Manufacturer: Ameri-king Corp

Model or Part No.: AK-450

TSO No.: ☐ OC91 (121.5 MHz) ☐ OC91a (121.5 MHz)
☐ OC126 (406 MHz)

Was ELT still mounted in aircraft? ☐ Yes ☐ No

Was ELT still connected to antenna? ☐ Yes ☐ No

Did ELT Activate? ☐ Yes ☐ No

If activated:

Did ELT Aid in Locating Aircraft? ☐ Yes ☐ No

If not activated:

- Indicate Reason: ☐ Impact Damage
☐ Fire Damage
☐ Battery Expired/Damaged
☒ Unknown

Additional Equipment (Check all that apply)

- ☒ ADS-B
☐ Airframe Parachute
☐ Angle of Attack Indicator
☐ Autopilot
☐ Data Recorder
☐ Electronic Flight Bag or Handheld Device

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The right main gear bended and detached. Prop was bended on both ends. Nose wheel was pretty depth in the grass as a result of plane stopping. a runway light was broken.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

On June 25th, 2019, at approximately 1745 I unfortunately had an incident right after landing. I (right pilot seat) was flying with student Andrew Egger (left pilot seat) and student Matthew Davis (left back seat). The lesson was a review of maneuver prior to stage check. We went to the practice area and spent about an hour conducting maneuvers. Once we finished we head back to 2R4. We were planning on doing landings but as we were getting closed to the airport, I noticed bad weather (precipitation and obscured sky) on our far left side around 15 miles (heading approx 290-300) from us. At that moment, I told my student that this was going to be the only landing since I did not want the bad weather to catch us. Bad weather was expected to occur about 2 hours after our flight according to forecast but it was clearly and unfortunately moving faster than expected. Since weather advisories on 2R4 has been down for over a month due to construction at the airport involving new taxi ways and repairs, neither Pensacola approach or any other source was able to provide current wind situation in 2R4. I started paying more attention to my surroundings and to the CTAF. As we were establishing on downwind to land runway 18, we started feeling some bumpiness and I took controls from my student and told him I was going to conduct the landing since it was starting to get bumpy. As I was turning base, I notice the C172 on final decided to go around and stated very strong winds similar to windshear. As I turned final I decided to also go around since I also did not feel comfortable with the approach and flew away from the airport for a few minutes. I took the decision to come back once I saw a C172 had just landed. As I was approaching the airport again it felt way more calm and I was able to get to stay stable during final, able to descend and land. Since I was being cautious with the unpredictable wind I only came in with one notch of flaps applied which had the aircraft coming at an approach speed between 70-75 kts (normal approach is usually 65kts) Unfortunately, upon landing (touch down was by taxi way B1) I felt a strong push from behind that accelerated the plane tremendously. Power was already Idle so I decided to start applying breaks since there was not sufficient runway for me to conduct a go around safely (clear of obstacles). Even with full breaks the plane continue moving forward approaching and leaving the end of the runway very fast. I needed to make the plane stop to keep me and my students safe since straight ahead after the end of the runway there's only a small patch of grass before reaching a fairly deep ditch and the fence that surrounds the airport; having this in mind I turned the aircraft to the left which made the plane drift to a full stop on the grass. The plane unfortunately suffered damages to its right main gear, props and possible nose wheel (it ended pretty in the dirt while coming to a full stop). Students and myself immediately vacated the plane safe and with no injuries. It was a very unfortunate event. Wind shear took over right after landing making the plane start rolling at a very fast speed. Before vacating the aircraft I made sure to turn everything off except the fuel selector since as I was trying to it got stuck on the left tank and since I was not sure about the extent of the damages it was important to vacate the aircraft as soon as possible and walk away from it with my students. The mechanics and fellow instructors were able to take pictures of the scene and forwarded it to Devin and Ed respectively. As soon as I put the plane to a stop and made sure my students were okay, I immediately called Ed and Devin and informed them about the incident. I was also able to talk to an FAA Inspector (Anna William and Todd Pryor).

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

I am so humble by this unfortunate experience and have so much respect for aviation and all its components (safety, weather, etc). At the end of the day Pilot in Command is the one in charge of the safety of the flight and me as the PIC of this flight am so grateful that my students and I were able to walk out of this with no injuries. I have learned so much from this experience. Even though the situation turned to be a scary one in a very short period of time, maybe staying in the air longer before coming back would have help prevent even more the unpredictable wind shear. Definitely not just judge that someone else just landed but the outcomes of different "what if" situations and taken more things into consideration, such as runway lenght and the impact it would have made in this exact same situation. After several thoughts and online training, I definitely think this incident could have been potentially prevented if I decided to deviate to a nearby controlled airport with a working ATIS and the advise of ATC which would have provided way more situational awareness which was going to be very welcomed under a stressful situation like this one.
