Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Motor/propeller strike, top of rudder/vertical stabilizer impact with ground, 1 bent wing strut, minor damage to fabric.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The day began with a 7am departure from Lake Hood (PALH) with the intention to fly to the Talachulitna River (Tal) for fishing. We were a flight of 2, my PA-12, and a friend with a super cub. Anchorage clearance was contacted a squawk code attained. There are 2 backcountry strips on the Tal, both are upriver from the Talachulitna River Lodge. Other than light smoke over the whole Anchorage and Matanuska-Susitna area there were no notable conditions. Winds light and variable, no clouds, and no upcoming changes in the weather. I arrived in the area and made multiple passes over the strip to determine wind direction and approach lines, obstacles, distances, and general conditions for using the strip. The flight time was one hour.

After fishing for a 3 hours I prepared to depart. The time was 11:30am, conditions had not changed except the temperature had increased. I often employ the 70/50 rule for using backcountry strips and was prepared to use it again. I had noted the halfway point of the strip. After accelerating and reaching the halfway point I could tell the plane was not ready to fly and I was aborting the takeoff. I fully reduced throttle and began to apply brakes. I was not getting full braking action, but was getting some I was prepared to let the plane roll into the low bushes at the end of the strip and was reaching for the mixture to stop the motor in preparation of the roll when suddenly it flipped and I was upside down. I turned off the key, the master, shut off fuel and all electrical switches. I did a quick body check to make sure I was not injured then prepared to release seatbelt. I then exited out the main door. The ELT had activated and I turned it off as this was not an emergency situation.

Upon inspection of the scene it became clear the right tire showed a skid mark from the initial point of brake application. The left tire showed two bounces over the same distance. Therefore I deduced that the left wing had been flying and prevented the left tire from contacting the ground and providing braking action. At the point the wing stopped flying and the tire made full positive contact with the ground the application of brakes was strong enough to flip the plane.

After the incident, the other plane was emptied to reduce weight and we found an alternate area for takeoff on the riverbend to the east. The plan was for him to fly to the Talachulitna lodge to find boat assistance to retrieve myself and gear. We both had Garmin Inreach devices for text communication. No boats were available and I floated the river in a packraft to the lodge where we departed back to Anchorage.

The plane and remaining gear was collected the following day.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This spring and summer I had been flying in this plane exclusively. I felt I was accustomed and well practiced to operate out of backcountry strips. However, most of my flying is conducted in the evenings and temperatures this summer had not been as hot as that day. I did not appropriately consider the affects of density altitude. I felt confident in my handling of the plane and the use of the 70/50 rule. Aborting the takeoff was the right thing to do, but in the haste of the situation I was not able to identify the cause of the lack of braking. Had I been able to determine that the left tire was not down I could have adjusted braking pressure and moved the stick to the left to drop the wing.

However, before even getting in the plane I should have considered the increase in temperature and the impact it would have and then taken the time to look for alternative takeoff routes, or wait out the temps until the end of the day brought cooler temperatures.
