Statement-

On July 5 around 1200pm I left Merrill field with full fuel to fly up to the Indian river for scouting landing spots for fishing on the river. A little over a hour later I made it up to the indian river for some scouting. I was able to make several approaches on a gravel bar that could be a possible spot to land and park, but made the judgement call not to land in the area due to in a section of the gravel bar was a large dip and it shortened the landing strip. I was not able to land near the river to get into the fishing spot I wanted so I climbed out of the area to check out areas for hunting while heading south towards talkeetna. Along the way heading south I spotted a couple areas that I wanted to try and land to take a short break and gain some experience in the hills of north of talkeetna. around 230pm I spotted the landing that I wanted to attempt it had 2 directions that had landing areas that looked good. One was from north east to south west and the other from south to north. Since I crossed the landing spot from the north I started a left hand shallow turn to assess the area and set up for a left downwind approach for the NE to SW landing. I set up for the landing knowing that I would not actually be landing but assessing the terrain, and monitoring airspeed vs ground speed. The terrain looked fair and the airspeed vs groundspeed matched to indicate not much wind from this direction for landing. I was able to then go around and set up for a left downwind for the south to north approach doing the same tactics as stated for the other approach. Ground seemed smoother and the hill did not seem as steep as well as the wind being similar as the other direction. So I went around to set up for a landing approach for the south to north due to it being the better direction. Once set up for the landing I was in full landing configuration and at the approach speed I wanted. I executed the flare and touched down close to my spot with tail down I started to apply breaking. I was then bumped back up into the air by a small bump, plane then came back down to the ground when I started to apply breaks again with tail up, attempting to stop the plane by the end of the top I was not able to and started to go down hill, with tail up breaking, and additional bumps resulting in the plane nosing over at the bottom of the hill and rolling all the way over with the tail hitting the opposite hill. Once at a complete stop upside down I was able to release myself out of the harness and crawl out of the plane through the right hand door. At 3:00PM Ensuring I was safe I was able to then shut off the master and mags as well as grab my cell phone. I was then able to contact Steve Williams and explain what happened. He then said he would come and help me to get out of the area and assess the plane. Steve showed up about two hours (5:00 PM) later with the equipment to roll the plane over however we were unable to roll the plane due to the terrain, and we would need a helicopter to come retrieve it. Mean while during the walk around of the area Steve was able to give me a lesson on the area and what I may have done wrong to end up in the position I was in, as well as what he would have done differently. Once back to Anchorage I was able to contact Kevin Wycoff to start the process on retrieving the aircraft as well as insurance notification.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Closer inspection of landing surface as well as roll out go arounds. Using go around procedures. Additional training.
