NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Decided to reposition aircraft from PATK to AK44. Performed preflight inspection of aircraft. Performed before start checklist. Started aircraft. Performed after start checklist. Received weather information from Talkeetna Flight Service on 135.200 mhz. Released parking brake and began taxi from South Transient Parking to Runway 19. Contacted Talkeetna Flight Service with current weather information and departure intentions. Held short of Runway 19. Set Parking Brake. Performed engine runup and before takeoff checklist. Released parking brake. Called "Talkeetna Traffic, Skywagon Two Nine Nine Departing Runway One Nine, Right Turn Landing Village Strip, Talkeetna" on 123.600mhz. Checked for aircraft on final and entered the runway environment. Lined up with runway center line. Added full takeoff power. Did not use flaps for takeoff. Departed runway 19 at approximately 0855 Alaska Time.

Made right turn for the AK44 behind Pacer and Super Cub traffic ahead, also inbound for AK44. Performed before landing checklist. Made straight in for runway 34 at AK44. Reduced power and began slowing to approach speed. Set flaps 10 and then 20 degrees. Pacer and Super Cub traffic cleared AK44 runway environment when I was approximately 1 SM final. Continued to reduce speed. Set Flaps 30 degrees. Short final, over threshold, set flaps full 40 degrees. Performed short and soft field landing technique, setting down gently, without bounce, three point attitude, full back elevator control. Aircraft initially felt normal. Approximately 2 seconds after touchdown, aircraft tail began lifting off of the ground surface. I confirmed my feet were on the floor, brakes not actuated, maintained full rear elevator control. When the aircraft transitioned from damp grass to dry dirt/gravel, the tail lifted rapidly, ultimately causing the nosecone and propeller to contact the ground. The plane slowed its rate of tail lifting, but continued over center resulting in the full inversion of the aircraft onto its back. With the fuselage resting in a small depression in the center of the runway, the wings were damaged from supporting the aircraft in its inverted state. The vertical stabilizer and rudder were crushed when the tail impacted the surface.

I hung inverted, uninjured in B.A.S. inertial reel seat belts, thankful I had installed them a week or so prior. I released the seatbelt and fell to the ceiling of the aircraft. Opened the passenger door and exited onto the right wing. I took a minute to collect myself, trying to determine what had happened. Reentered the plane. Pulled the mixture to idle cutoff. Turned the mags and master switch to the off position. Reset the ELT which had activated. Moved the fuel selector to the off position. Grabbed the fire extinguisher.

Upon reentering the plane, I realized the parking brake had not fully released and was caught on the bottom of the panel. After flipping the plane back to its upright position, I attempted to set and release the parking brake multiple times. The parking brake would never return to fully 'OFF' or released position without jostling the cable. No damage was indicated in the parking brake system after the accident. It is my opinion that the parking brake system had become 'sticky', requiring lubricant.

Due to taking off (full power) without flaps in a lightly loaded aircraft, I did not notice the dragging of the partially actuated parking brake. Landing (power idle) with full, 40 degrees of flaps caused the tail of the aircraft to remain in a higher position, due to the large change in the center of lift and forward pitching moment and lack of air over the horizontal and elevator.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Pre takeoff recognition of partially actuated parking brake.
