NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed Georgetown, DE, KGED, around 11 am. Aircraft was fueled in GED to 50 gallons, based on weight and balance. The flight was routine. The automated weather for CDW was hazy and the landing runway was localizer approach runway 22. Upon reaching NY approach, I did not think I could visualize the airport well. I was asked if I wanted to fly the visual approach. I elected to fly the localizer approach.

I was vectored to intercept the runway 22 localizer and about 2 miles before reaching FAIRR, the final approach fix, I was handed off to Caldwell tower. Tower cleared me to land number two behind an aircraft on the base leg and what sounded to me to be not too far ahead. I was not aware of any traffic ahead until that moment. At that point, I devoted most of my attention to locating that aircraft. As I passed the final approach fix, and still looking for the traffic, I began my final descent and did that without lowering the landing gear. My usual routine is to lower the gear at the same time as passing the final approach fix. I was distracted by the traffic which I still had not visually located. I was also looking for it on my 'ADSB in' equipment but it was not picked up. I finally saw the traffic but it was fairly close. I estimated the distance as about 1 to 2 miles away and still on base leg. This kept me distracted and I missed the signs of the gear still being up. I did not hear any gear warning horn, and my wife told me later that she had not heard it either. I did have some extra speed on and I floated a bit to bleed off the speed. At the last moment, my sister yelled at me that the gear was up, and I heard the Tower calling for a go around. I pulled up on the yoke and moved to advance the throttle, but it was too late and we struck the runway gear up. The nose up attitude at the very end probably caused the airplane to stall and the left wing dipped and hit the ground. At that point the airplane skewed to the left and slid into the grass. Everyone was unhurt. It took me a moment or two to open the door and everyone exited the airplane, me being last. Before I left the aircraft, I shut the master switch and the key, and put the fuel switch to off.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I was distracted by the report of traffic ahead on the final approach. In the haze I had a hard time picking it up visually. It might have helped if ATC had informed me of the traffic before handing me off to tower. At any rate, I was too distracted to follow my routines.
