NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I arrived to work around 1200. N78658 was out of the hanger and the person I was relieving for the day had put fuel in it and gotten it ready for me. I did a preflight of the aircraft and checked gas and oil levels. I had 15 gallons in one wing and 17 gallons in the other. I then checked the tanks for water and after finding none I proceeded to taxi to the terminal. I did a preliminary run up once over on the ramp before I took my first tour. My first tour was an Inlet Tour, lasting 30-45 mins, it had 3 passengers. When I arrived back to the terminal there was a large group of people waiting for tours. I was informed that all would be Discovery tours, lasting about 10-15 mins. Another tour pilot and I escorted the first two groups to the planes, and we departed. I arrived at the terminal after the other pilot and he was already escorting out the other passengers for the next tour. Before loading into the aircraft, I asked each passenger's weight. The mother claimed to be in the high 100s, the larger child claimed to be in the low to mid 200s and the small child was in the low 100s. The larger child requested to sit in the back and the mom asked to sit in front. With their weight being close I sat the larger child behind me and the small child in the rear next to him. With the mother in the co-pilot's seat. While loading we went over how to use the seatbelts and headsets. We received taxi instructions behind the other tour airplane, N9392H, for runway 23. As we were taxiing tower provided a wind check and stated that the winds were now favoring runway 35 and sustaining. He asked the pilot of N9392H if he would like to switch runways. N9392H accepted the change and so did I. Tower cleared N9392H for departure and while he was performing a short field takeoff the pilot suggested 10 degrees of flaps for the takeoff. I noticed that he had 10 degrees as well. While N9392H was waiting for departure clearance I performed a mag and idle check. Once N9392H departed I was instructed to line up and wait by tower. I taxied back using all available runway and put in 10 degrees of flaps. Once cleared I applied full power and held the brakes checking all instruments, performing a standard short field take off. On the roll all instruments were reading correctly, and I rotated around 60-70 as I normally would. In the initial climb airspeed continued to climb. I started to feel the airspeed drop and noticed it on the instruments. I proceeded to nose down to gain airspeed and continue on departure. I knew that I had cleared the trees at the end of the runway. My airspeed continued to drop and that is when my right wing stalled and spun me 60-90 degrees. I performed a stall recovery keeping full power and taking out my flaps. At that point there was no clearing the trees and I was performing an emergency landing. I pitched for best glide to avoid the trees below me and pulled power. The clearing that was in front of me was my only option, a turn for the airport environment was not a good option at the low airspeed I was at. I proceeded down for the field. The only thing I was focused on was getting the airplane on the ground. I had no time to contact tower or brief my passengers. I came to rest in the trees and bushes on the other side of the field. I turned off the master and mags and assessed my passengers for injuries. I assessed each passenger and cleared them for a safe egress. I noticed that the only safe egress route was through my door. I instructed my passengers to stay while I cleared a route out of the bushes. Once I found a safe route, I peeled open my door wider and led them in the route that I had found to safety. I then proceeded back to get the airplane's documents and my documents.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This accident could have been prevented with an increase in big picture situational awareness and better recognitions of flaws in an accident chain. With the conclusion of this investigation I want to be able to study and pick out the flaws in the accident chain and be able to expand upon them. I want to be able to use the knowledge that I gain from this report to help teach others, in my part 141 program, what not to do and what the red flags are in those situations.
