Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left wing impact damage to fence and left landing gear broken trailing link connector. Nose cone from impact to brush and small branches

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Flight originated in Ephrata WA with my spouse , we flew approximately 20 minutes to the Quincy airport. We picked up two additional passengers at the Quincy airport for a intended trip to Jackson Hole WY with a stop over at the Minam River lodge for lunch which was approximately 1.4 hours. Uneventful landing and after lunch (approx 1330) we taxied to the approach end of the runway in which the winds were generally favoring from the north. After standard run up and pre flight checks I applied full power and started our departure roll. Acceleration was slightly slower than normal but not unusually out of norm. As we accelerated to approximately -20 below rotation speed the runway was a bit rough and the airspeed indication was not showing a comfortable amount of increase in my opinion. I decided to abort the attempted takeoff at this point. I came to idle and applied brakes to stop. I mis-judged the low coefficient of friction on the grass and was unable to get the aircraft to a complete stop before the end of the runway, thus striking a fence post/galvanized pipe and brush located at the end of the runway.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Review departure performance data of the aircraft being flown more closely. Made the decision not to go into this type and length of field with the equipment being operated as the margin for error was small. Make the decision to abort takeoff earlier to ensure the ability to stop in time to avoid over running the runway. Make the decision to abort the takeoff sooner to avoid over running out of the runway environment.
