Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft total loss. No property loss.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 24 July 2019 around 8:00 am, I began a herbicide spray job in N1509E on a 77ac field, located immediately south of David Road and east of Hwy 382. Wind was from the north at 3-8 MPH; visibility was 5+ miles. While flying a clean up pass west-to-east over power lines on the north side of the field, I failed to maintain adequate look out and descended. I saw a telephone pole too late to clear the top and struck the top one foot of the pole somewhere on left wing. The aircraft shuddered and began an immediate left roll through a tree top and impacted the ground inverted. I attempted to open the right door and egress, but found it was blocked. I got the left door open, unlatched my seat belt-shoulder harness inverted and egressed into a ditch. All of the wreckage was located in the SE corner of a rice field immediately north of the field I had been spraying. There was a small fire near the engine area that was put out by the local fire department.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Primary task should have been avoiding obstacles. Accident occurred because of loss of focus on primary task. Altitude not high enough to compensate for loss of focus. Accident could have been prevented by flying a higher altitude over power lines, or not flying over power lines at all and accepting that the north edge of the field would not be done with the current wind. Accident would have been prevented by focusing more on obstacle clearance than other aerial application tasks.
