Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft destroyed unknown amount of corn as it entered the field. Aircraft was destroyed and caught fire withing seconds of coming to a complete stop.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

On July 24, 2019 I was working off Hebron Municipal Airport. I had been taking an average payload of 120 gallons. I was then asked to take a payload of 170 gallons. I departed runway 12 at 1:40 P.M. and tracked 283 degrees for about 4 miles to the field I was to apply my payload on. I made two circles of the field observing for any obstacles and wind direction. I noted a cross-country high-line wire on the north edge of the field and a southern wind. I decided the best pattern to use was a left racetrack running north and south. I made my first pass heading south on the west edge of the field. I then made my second pass on the opposite east end of the field heading north. My next pass was on the opposite end of the field again on the west side. I performed a flat, minimum bank angle turn to the south. When I leveled back out on my third pass, I was level with the cross country high-line wires. I made a pitch up control input to clear the wires. When I pitched up the plane lost altitude instead of gaining altitude. I then determined that I would not make it over the wires so I reacted by pitching down to miss the wires and go under them. My airplane then struck the bottom set of wires on the top section of the vertical stabilizer. The collision resulted in the loss of the top section of the tail and my rudder. I pitched up after the contact to avoid entering the corn field. My right spray boom began to drag the top of the corn. Soon after that my aircraft began to enter the corn field. The airplane then tipped up on its nose, loosing the propeller and tearing the engine off the fuselage. The aircraft settled facing to the East. I was able to open the cockpit door, remove my seat belt and helmet, and exit the cockpit. As soon as I exited the airplane I heard sizzling coming from the front of the airplane but saw no flame. I then went back to turn the fuel off and retrieve my belongings. As soon as I got back to the airplane there was smoke and flames coming into the cockpit. I stepped back after retrieving my wallet and my helmet and watched helplessly as the plane burnt.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This accident could have been prevented by lightening the load on the airplane during the hot and high density time of the day. The accident could have also been prevented by working opposite of the cross country power lines that run through that area.
