NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Wednesday, July 24th 2019 I Thomas M. Jones was flying a Hughes 269A, N269RR from Clarksville Tn. Outlaw Field to Springfield Robertson County Airport (M91). The helicopter had just completed its annual and 100 hour, which had been done at Outlaw field in Clarksville Tn. Before the departure at Outlaw field the aircraft was fueled and I had done several takeoff and landings for the annual and the aircraft was shut down between landings for inspection. After the final walk around inspection weather was checked for Springfield Airport and I departed Outlaw Field for Springfield (M91) about a 40 minute flight and the helicopter was performing great. At arrival to Springfield Airport a normal landing was performed and helicopter was taxied off the active to the hanger and shut down. After a walk around an of the aircraft the aircraft was started back up and I then flew several traffic patterns with my son again the helicopter had a normal approach and landing and was taxied to the hanger and one passenger exited the helicopter and another got on for a flight around the traffic pattern. Once again the helicopter performed a normal takeoff and stayed in closed traffic. The helicopter entered a normal approach and landing and was air taxing off the runway to the taxiway the same as had been earlier. Upon turning the helicopter onto the right taxiway to the hanger off the runway the helicopter began a continuous turn to the right drifting off the taxiway to the right, I then applied full left pedal with no change in the rotation of the helicopter at which time I closed the throttle to perform an autorotation in order to slow the right rotation which was now increasing in speed. Full left pedal and autorotation had little effect on the rotation, collective was applied prior ground contact to reduce the rate of decent and the helicopter landed upright on the side of the taxiway and slid into a small drainage gully on the side of the taxiway. When the helicopter slid into the water drainage ditch the helicopter's main blades came into contact with a 5ft to 6ft berm located on the side and above of the taxiway and the helicopter came to rest on its side against the berm. I then performed an emergency shut of the helicopter and exited with my passenger. Neither myself or the passenger was in injured.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Check wind gust at arrival airport even if it is a short flight.
