Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

No damage to other property; engine stopped by prop strike at full power; wing showing a small dent; lower nose and firewall showing some deformation; prop destroyed; nose wheel door jammed shut. Small amount of hull damage aft of firewall, all antennae and strobes on belly destroyed; starboard passenger step torn off.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The entire flight was uneventful until the final segment of landing. I had intercepted the approach for runway 33 at KFCI at PUBBS and had slowed the plane to about 140, at which point I deployed the landing gear as a means to get within the white arc for approach flaps. I disengaged the autopilot as part of beginning the descent and manually maintained slope and course. At about 500 feet (MDA is 417 msl) I put in full flaps and trimmed for 85 knots. I crossed the threshold, levelled off, and allowed speed to bleed off as I began flaring. I was just about to touch down and the stall horn sounded. I also thought at that exact moment I heard another sound that I have described as scraping-sounding, but at this point I am not sure. In any event, for a brief moment I thought the stall horn was the gear warning annunciator. I did not check the lighted annunciator along the glare shield, and did not think to rely on the three in the green indicated above the gear lever. In response to the incorrect belief I had not lowered the gear, I firewalled the throttle, pulled back on the yoke and attempted to initiate a go-around. Despite the high angle of attack, high power setting, low speed and high drag, I did not put in enough right rudder, which allowed the aircraft to deviate off center to the left and over the grass beside the runway. I thought about raising the flaps, but was more afraid of losing lift than of not reducing drag. It was at that point that I realized that the gear was in fact down and had a specific recollection of doing so, and in an effort to reduce drag, decided to raise it. A secondary thought was that I did not want to land in the grass, which was at best rough-graded, with the gear down, for fear of flipping the aircraft if I was not able to remain airborne. I believe that I was gaining altitude at that point, as the terrain was a good bit higher at my point in the air than it was at the approach end of the runway. The impact occurred in part because my climb rate was not enough to overcome the slope of the terrain. I am not sure if it was the passenger step on the starboard side that hit first, or the prop (but would bet on the step) but I recall hearing the prop tips hitting, the engine stopping, and the sound of sliding on the grass and kind of bumping along, rotated about 80 degrees to the right, which is why I think the step was the first impact. I turned the fuel lever to off, turned off the battery, closed the throttle and mixture, and exited the aircraft with no injuries whatsoever.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

After long reflection I have concluded that I should have relied upon the "three in the green" before attempting the go around. Once the go around was initiated, I should have put in more right rudder to prevent p-factor from causing the plane to drift to the left due to high power, high angle of attack, low speed, and high drag. I also regret the conscious decision not to raise the flaps, at least from full to approach once I began the go around. Once the plane was no longer over the runway the terrain rose faster than the plane was climbing, and that contributed as well.
