In reference to accident on 7/30/2019, as I remember.....we did our pre flight, and then took off to pattern altitude, did a left hand pattern, and set up to do a 3 point landing. We came in for a landing, and did a hard bounce, so I added power, and tried to stabilize plane and get straight with the runway. We began to run out of runway, so I added full power, and shortly after my instructor (Jim Craik) took the controls, and we clipped the tops of some small trees, and the the right wing hit another tree, and proceeded to do a right hand stall. I remember the plane tipping, but do not remember the impact.
