Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nose gear and left main gear separated from the aircraft. Left wing flap damaged. Corner of right wing leading edge suffered composite damage. Right wing strobe/position light missing. Vertical and horizontal stabilizer separated from fuselage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Student flew a pre-solo (501) flight on RWY 26R with his instructor immediately prior to the accident sortie. The student accomplished 2 normal landings to touch-and-go, a go-around, a simulated forced landing, and a normal landing to a full stop on the 501 sortie. After successful completion of the 501, the IP endorsed him for his solo (502) sortie.

The student departed KPUB RWY 26R at approximately 0750 MDT for a pattern only solo at KPUB.

The following statement was provided by the student pilot.

'After successful completion of my 501 ride, I began my normal startup and taxi procedures to RWY 26R to conduct my solo pattern. I conducted a normal takeoff and proceeded to make 3 normal approaches on RWY 26R as directed. On the first approach, I overshot my perch point and made too wide of a base turn where I was directed by my instructor to go-around on the radio. I performed the go-around and proceeded to my next approach. The second attempt was conducted successfully and I continued with a touch-and-go. On my third approach to RWY 26R on the downwind, I was directed by ATC to wait for traffic approaching from the front going to my left and to make a left turn after the second aircraft and follow for a change to RWY 8L. I performed the directed action and entered the downwind for RWY 8L as normal. All checklist items and steps seemed normal and I lined up with the centerline on final, altitude and speed were normal at around 65 KIAS. At approximately 30' AGL I experienced a right yaw condition that I immediately attempted to correct with left rudder. The aircraft did not respond to the left rudder input, so at approximately 15-20' AGL I decided to go-around and try again. When I applied full throttle, the aircraft jerked and continued to descend with right yaw. When I felt the aircraft hit the ground on the runway I attempted to keep it straight but since I was already sideways it felt like a main tire popped and the aircraft proceeded to head off the runway to the right. Recognizing the situation, I immediately pulled the control stick full aft and continued my emergency checklist-ensured throttle was at idle, mixture-idle cutoff, ignition switch off, GEN/BAT master switch off. When I came to a stop I turned the fuel pump off and evacuated the aircraft.'

Clarification about the sequence for patterns during the solo portion

1. Takeoff on RWY 26R-downwind to RWY 26R-base turn to RWY 26R followed by a go-around on RWY 26R.
2. Crosswind for RWY 26R-on downwind, tower provided instructions to the student to follow traffic and change runway to 8L. Student followed directions-downwind to RWY 8L-base to RWY 8L followed by a touch-and-go.
3. Crosswind from RWY 8L, downwind to RWY 8L, base to RWY 8L for a planned full stop. The accident occurred on this pattern.

After touchdown, the aircraft exited the south side of RWY 8L heading in a southeasterly direction. During the excursion, the left main gear and the nose wheel separated from the aircraft. The aircraft continued approximately 180' to the southeast before coming to a stop. As the aircraft came to a stop, the aircraft rapidly turned 90 degrees and came to a sudden stop. The aircraft came to rest facing north, approximately 120' south of the edge of RWY 8L.
