Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left and right outer wing leading edge and wing tip bent, propeller bent, engine 4 cylinders cracked, all landing gears broken off, ruder and flaps bent.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

During landing left main gear touched runway first followed by right main gear with tail little high.

Light after right main wheels touched down aircraft pop up with nose too high attitude. Even it pop up into the air with nose too high, PIC had no input to flight control or power about 3 seconds. It was became uncontrolled aircraft, its climb, pitch high and shifted to the right. It started stall. I felt PIC became incapacitated or go into panic. So I took control to save our life, putted power and pushed pitch slightly low. But it was too late, right wing stalled and wing tip touched down to the ground. Just before crash to the ground I tried to reduce the power to idle for reduce impact.

I tried to help PIC for prevent departure stall, but it was too late.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Should lower the pitch immediately after pop up to avoid the aircraft stall or immediate go around.
