Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

There was no damage to any working parts of the plane: nose gear, main gear, no prop sticks, engines or any fuel tank issues as everything was in tact.

The damage was the bottom of the plane that slid on the runway. It consisted of the bottom from the front of the back picture window to back towards the center of the baggage door. That is about 10 feet of bottom that wear through the skin and rubbed or wore down about 1/16 inch of metal on the keel beams and the cross braces. A few of the antennas were wore off also.

There was only the pilot on board and there was never a bump or collision. No bodily damage just a bruised ego and costly repair.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

The plane was flown from Minden/Tahoe airport (KMEV) to Stockton airport (KSCK) leaving August 14 at 1350 and arriving Stockton at 1420 approximately. After takeoff I got flight following for a VFR flight to Stockton. After climbing to 14,500 feet i had to start my decent into Stockton within 5 min at 14,500. I was flying at about 220 kts all the way into Stockton. Stockton tower cleared me to land with a right base onto 29R. I needed to slow to below 200 kts for gear down which took some time after turning final. I was opening oil cooler doors and full flaps while I was slowing. I then was closing in on the runway to land and pushed on the down gear lever to lower the gear. I was moving down to the runway but I pushed hard on the down lever. After the fact in thinking about this I must have been pushing the lever to the side instead of down which bound up the handle. At this time I was almost on the runway which I had to then fly the plane without the gear down. It was a very smooth landing with no bumps. I slid to a stop with all props going which I then turned off the engines and shut down the plane. I then got out of the plane to turn the props and wait for recovery.

I found another person to help raise the plane on jacks so the wheels could be extended. Once we got three green lights showing they were locked we towed the plane to my hanger.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The major issue to prevent this is to make the pattern a little longer to give more time to go through all procedures on the check list of which would give me more time to resolve any issues that may come up on the landing procedures. I think I could have resolved the gear down lever issue with more time. I also think the horn and a light can be set up earlier for warnings. The horn should also be heard in my headset. These warnings are an after thought as they didn't help me in this situation.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I believe it was a pilot operation issue in pushing the down gear lever to the side to bind it from coming down.
