Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The propeller was destroyed and the engine experienced sudden stoppage. The left landing gear collapsed and folded under, causing significant damage to the fuselage aft of the first row of seats and to the left wing when it hit the ground. The left elevator detached. The right wing tip was punctured by sagebrush.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At about 8:20 am, with my wife and adult daughter on board, I launched from a 1,700' long, level grade, dirt strip (elev. 7,450') that lies on a North/South orientation.

The sky was clear and the winds were negligible (light/VAR; 3 KTS $\pm$). The temperature was 68°F (DA 9,200'). Although heavily loaded, we were under gross.

On run up, all checked "normal". I lined up to take off North to South, set flaps to 20°, and held brakes as I ran the power up to 36.5" (max) of manifold and 2,700 rpm. I released brakes and eased back on the yoke to unload the nose wheel, as we slowly accelerated.

The take-off roll seemed longer and slower than usual, and about two thirds of the way down the runway the airspeed was 45 knots. As we approached the end of the runway, we briefly lifted off (maybe 15') momentarily, drifting to the right and then settling back to the surface.

The right wing tip hit sage brush, pulling the airplane further to the right, before skidding to the left and settling once again to the ground. The left landing gear folded under the fuselage and the left wing tip hit the ground, bending the wing upward. The nose wheel and gear were separated from the airplane, as we skidded to a stop. I turned the mags, fuel and master off, and, thankfully, we all got out of the airplane without injury.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I believe that loss of control occurred because I asked the airplane to fly before it was ready. The density altitude was high; the strip is very short; we were heavily loaded. The aircraft didn't accelerate as quickly on the dirt as it does on the hard surfaces that I'm used to (where I operate, nearly 100% of the time).

I had previously operated off of this strip, maybe a dozen times, only, in the past 7 years. Nor, in general, do I have enough "back country" operating experience to have attempted this operation.
