Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Sudden engine stoppage upon hitting trees and shrubs, prop blades bent, nose wheel sheared off, cowling destroyed, twisted fuselage, horizontal stabilizer damaged, left and right wings damaged, flaps bent, control ends sheared, trees and shrubs damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pilot and passenger had departed KJNX for a pleasure flight to the NC coast with a stop planned at KFFA and W95. The stop was made at KFFA using runway 21. While on the ground it was noted that the winds favored runway 3. Upon a routine departure the trip proceeded to W95 by following the coastline.

Upon reaching W95, runway 6 was chosen for landing based on observing the windsock next to the helipad and using the Garmin GDU 375 which displays XM and/or ADSB weather. The GDU 375 showed wind listed as calm with 10 mile visibility. A normal left downwind to base to final pattern was flown to runway 6. Upon turning final, the aircraft was high and a go around was initiated. On the second landing attempt, the downwind was extended and again on final the aircraft was high. A forward slip was used to lose the excess altitude on final. Upon crossing the threshold of runway 6 the pilot/owner realized that the airplane was drifting off the runway centerline and that the left main wheel would not be on the runway but in the grass which had standing water. Fearing a cartwheel from the wheel and wheel pant settling in the water, the pilot/owner initiated a go around as a right rear quartering cross wind pushed the airplane toward the low tree line to the left of the runway. The airplane still had full flaps and the application of power produced a pitch up in attitude as the pilot/owner struggled to turn the aircraft to the right and climb out. The aircraft impacted the trees while making full power.

After the crash landing a call was made to 911 to report the accident.

The pilot and the passenger suffered only minor cuts, scratches and bruises. Both the pilot and passenger were checked by local EMS personnel and both declined to being transported to a hospital 3 hours away.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

There is a wind sock located low and near the helipad on the 24 end of the runway. It showed no wind when in actuality there was gusting wind that favored runway 24. I have flown into W95 many times and have experienced turbulence caused by wind across the trees and shrubs at the approach end of runway 6. I believe that a wind sock should be located at each end of the runway to give a better indication of favored runway based on prevailing winds.
