Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

- Right landing gear leg/strut bent
- Right wing bent upward outboard of strut attachment

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

- Did weather/flight planning for the flight from Fairbanks to Tok Junction in the evening of the day prior and again on the morning of the flight
- Obtained complete briefing via Foreflight
- Filed and activated a VFR flight plan
- Flew from Fairbanks to Tok at between 3500 and 5500 feet MSL and descended to around 800 AGL over Tok and performed one full pattern overflying the 07 paved unway checking the wind sock.
- Noticed around 5 Kts cross wind from the right
- Descended at normal rate and stabilized with full flaps on final
- Touched down, on centerline, while on roll-out a gust from the right turned the plane a bit towards the right
- Applied some left rudder to correct, and the plane veered left and the left wheel slid off the runway edge down a gravel mound on which the runway is built
- As the plane was gently sliding off to the left of the runway I pull the mixture to cutoff
- When the right wheel caught in the gravel to the side of the runway, the gear leg bent and the wing impacted the gravel bending upwards outboard of the strut attachment
- I shut off the fuel and the master and both my passenger and I exited the airplane from the door which opened and closed normally

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This is more a "lessons learned" commentary.

I practiced at my home base of Whitefish MT, by renting a Supercub and hiring a back country instructor before going to Alaska. We performed a number of grass landings, cross wind landings, simulated engine failures.

We discussed the upcoming flights in Alaska and various scenarios

Never did we discussed the fact that the accident plane had larger than standard tires

After the accident in two instances back country pilots asked me if I landed on the paved runway and if I was aware that parallel to it there was a gravel strip. They explained to me that that strip is to be used with back country tires, being more forgiving than the paved runway.

I had studied all information available including the AF/D and was not aware of this option.

So, I guess "maybe" the accident could have been prevented if I had chosen to land on the gravel runway, or, more drastically, if I had opted to fly to another airport with a strip subjected to less or no cross wind
