NARRATIVE HISTORY OF FLIGHT

Brian Schultz Pilot Certificate [REDACTED] and Justin Rider Pilot Certificate [REDACTED] departed KHII (Lake Havasu City) at 17:10 UTC for KPRC in N8619W (PA28-235) for checkride training for Justin Rider. Justin Rider was the student pilot flying and Brian Schultz was the instructor pilot. Per Brian Schultz instructions Justin deviated to P52 (cottonwood) for take off/landing practice. N8619W landed at P52 for a full stop taxi back landing on Runway 14 at approximately at 18:10 UTC. After briefing for a soft field take off and leaning for density altitude. N8619W departed Runway 14 with current conditions of wind 14 at 5, temperature 33 C, altimeter setting 30.12, and density altitude of 6100 feet. Upon takeoff roll Justin Rider was able to raise the nose per soft field technique, the aircraft was in ground effect needing slightly more right rudder due to the high angle of attack, Justin was correcting as a wind gust from the south east caused the airplane to drift left, Justin had slight left aileron in causing a cross controlled situation. Brian came on the controls with Justin at this point as he was previously guarding them. Brian told Justin that it was his controls but unfortunately Justin only heard his name and continued to try to fly with Brian not being able to overpower him. Brian realizing the plane wasn't producing enough lift to sustain flight with the induced drag/cross controlled situation pushed forward as hard on the yoke to keep the airplane from clipping the left wing in a stalled condition. The airplane impacted the ground about 50 yards to the northeast of the airport at midfield, separating the left wing from the plane. Neither Justin or Brian sustained injuries. Airplane appears to be a total loss.

RECOMMENDATION (How could this accident/incident have been prevented?)

Anytime you are operating at a high density altitude doing performance takeoffs/landings you have increased your risk factor. However the accident in question, the density altitude, aircraft performance and current weather conditions had all been taken into consideration. The training was being conducted in preparation for Justin's checkride which would be conducted at P52 and with similar conditions. No single thing caused this accident, as it was combination of compounding factors. Something that may have prevented the accident would have been the clear understanding of "My Controls" in period of direct. It was discussed and practiced in training but never during a period of high stress. It should be part of student/instructor preflight briefing and practiced periodically through training at periods of high stress.
