Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Leading edge of left wing impacted a 4" birch tree, denting the leading edge and bending the left main lift strut. Lower 8" of the rudder was bent, possibly from contact with underbrush.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I viewed FAA web cams for en route weather and checked ATIS. Departed Kenai Airport at 22:53Z with approximately 20 gal. of fuel and a light load consisting of a tent, sleeping bag, two firearms and survival gear. Weather was clear with smoke reported. I crossed Cook Inlet at 4500 feet and flew direct to an unimproved strip on the Kustatan River approximately 35 statute miles northwest of Kenai. I had flown into this strip numerous times over the summer and spent several hours brushing it out. It remains quite rough with several dips and humps.

I set up the landing into an approximately 10 knot headwind, landing to the south. I landed hard, and the airplane angled to the left. I dumped my flaps and attempted to arrest the leftward direction with braking, and then added full power in an attempted go-around. Before I lifted off and before I could get lined up with the runway, I impacted brush and a small (approx. 4") birch tree, approximately 250 feet from the touch down point.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I could have prevented the accident by

1. Carrying more power to the landing point, allowing for a better flare. I had plenty of room on the remaining part of the strip to bleed off speed and touch down further down the strip. I attribute the aircraft's leftward bounce at initial touch down to the impact on the uneven surface which kicked the aircraft to the left.
2. My go-around decision came too late. I had already retracted the flaps when I added power. The go-around should have been initiated immediately after the bounce.
3. Having committed to landing by retracting the flaps I should have left the power off and more aggressively braked to the right. Had I done so I might have missed the tree completely and certainly would have impacted it at a slower speed.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

The Lycoming O-320 engine was purchased as a newly overhauled engine from Aero Recip Alaska. I received no records indicating actual date of manufacture so I used the release date of May 2, 2005 as the date of manufacture and the basis date for computing total time. The likely reason the ELT did not activate was the slow speed at which impact occurred and location of impact being on the wing.
