Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

9am monday 9-1

Called locked martin flight center to get a standard briefing, weather was IFR till 1300z north of departure opening up at 1400z to marginal VFR across route and after 1500z good VFR good conditions along the way. Wind condition forecast 10-11knts N going to NW in afternoon along entire flight path.

I was flight followed by Minneapolis center until 8 NM before MCD, obtaining weather from 118.275, I changed to CTAF announced position along pattern. While lining up to runway in the pattern wind was 310 @11 on runway 26. I was countering crosswind with rudders to line up to the runway. Just over the runway crosswind seemed to increase the plane was being pushed to the left side we bounced upon touchdown, I thought about a full power go around, however I did not feel there was enough runway left to make safe take off. At that point with rudder controls I attempted to get the plane on center line from left side. When I realized the centerline of the runway was not an option I could get to. I wanted to safely stop the plane. Now the plane is entering the grass area in-between the taxi way and the runway. With the taxiway approaching and a hill before taxi A2 with a metal drain grate near the bottom of the hill. I continued breaking as much as possible and used rudder control to turn left so not to hit hill. The plane rested just before the hill.
