Stabilator damaged from debris

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

It was Sunday afternoon, 9/1/2019. It was a nice day. I rode my motorcycle to KMHT where the plane was tied down.

I planned to go to KSFM Sanford, ME. I still need to complete my solo cross country and I was planning to practice just one leg (Sanford) and come back to KMHT.

I called 1800 wx brief and got a briefing. There were no adverse conditions. Then preflighted the plane with my checklist. I completed a standard brake test. Performed a run-up. Got the ATIS. I decided to do a couple of landings at MHT before going to KSFM to practice at a familiar airport before going to a less familiar airport.

I got clearance for runway 6 from tower. I back taxied to the 2000 ft mark. Took off and flew runway heading. Made left traffic in the pattern. Climbed to pattern altitude, 1400-1500 feet.

Checked airspeed and put in one notch of flaps at about midfield on the downwind. Continued to fly the left downwind. Turned base mile or two. Then put in the 2nd notch of flaps on base. Textbook square pattern. 3rd notch on final. Decent rate was 300-500 ft per minute.

Used the slip technique to correct for the crosswind. Had right wing down with some left rudder to correct for direction. I touched down nearly on the center line, but a little flat.

The aircraft moved left on the runway. When I applied the brakes, the aircraft lurched left further and went into the grass.

I thought about giving full power to get back in the air, but decided to keep it on the ground. The grass safety area along the runway is mostly clear, but since I was practicing landing to stick the numbers, I ended upfield of the PAPIs.

I wasn't able to steer clear and ended up hitting one. Came to a stop gradually in the grass field along runway 6.

No sudden stop of aircraft or prop stoppage. I was wearing my three-point harness. I leaned out engine to stop it and waited for instructions from the tower. Declined EMT assistance. Waited for NTSB to clear movement of the aircraft before it could be moved off the field by a tug.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

In retrospect, I may have needed more dual instruction in N7777W. Even though it is type PA28-180 it has a different seating position and throttle control (push-pull) than the PA-180 I practiced in initially.

I need to do more crosswind landing practice. I've done 5 touch and go landings since 9/1, with dual instruction, in similar conditions, in a another PA28-180. I had good form and touch downs. I plan to do more.
