Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Prior to the flight in which the occurrence happened, we had departed from KNQA at 1630 central and arrived at M04 uneventfully. After this flight from KNQA to M04, crewmember 2 did a half hour area solo and came back to M04 uneventfully. We embarked the aircraft around 1800 central to practice performance landings takeoffs. This was my third flight of the day, so the plan was to do two soft field landings and takeoffs and two short field landings and takeoffs. I kept in mind about my 8 hour flight instruction limit. Once we were back in the plane, we started the engine and everything looked normal on the instruments and gauges. We taxied to the runway and decided to perform a soft field takeoff. With the control stick pulled all the way aft, we taxied onto the runway and did not stop per the soft field takeoff procedure. Crewmember 2 smoothly applied full power and released back pressure until it was about half aft. I had my finger on the control stick to feel how she was releasing back pressure and my feet on the rudder pedals to feel what her feet were doing, but I was not manipulating the controls at this point. As we moved down the runway, the nose started to lift off the ground and I noticed it was too nose high attitude. Instead of telling her to release back pressure or to put the nose down, I slightly pushed forward on the control stick to try to help the attitude. At this point, the plane started to pull to the right. I cannot recall if the stall warning horn was sounding off during this or not, or during any portion of the occurrence. As the plane was pulling to the right, the attitude was slowly getting better and to level. This is the point where we were either over the grass or just about to be over the grass. I noticed this and began to manipulate the controls, without saying "I have controls." We hit the ground and I pulled throttle to idle. While this was happening I reacted to try to keep the main wheels and wings from hitting the ground to prevent the plane from flipping. I applied back pressure to the control stick and since we were still being pulled to the right, I added left aileron pressure to the keep the plane off the ground so it would not hit the ground too hard. The plane came to a stop in the grass field and I pulled the mixture to idle to stop the engine, turned the ignition to off, and turned off all electrical switches. I made sure crewmember 2 was okay and made sure that I was okay. We unstrapped and exited the aircraft. I inspected the aircraft to make sure no fluids were leaking and that there was no sign of fire. After determining the plane was of no fire hazard, I called the chief pilot and followed his direction.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

When I noticed that the aircraft was in a nose high attitude, I could have verbalized that the aircraft was nose high and said that we need to reduce the pitch. When the attitude was becoming more dangerous, I should have taken controls, saying "I have controls." Nose down should have been the first thing to say and then I should have reacted faster to get the controls for myself and verbalized what to do.
