NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was in Carpenter Creek, 8NM SE of Chickaloon or 16NM NE of Palmer, Alaska.

Plan for the day was to take 4 loads moose meat, personnel, and gear to Palmer.

I departed Carpenter Creek at approx. 0900L with the first load of moose meat and had an uneventful flight to Palmer for drop-off. I fueled 100LL at Palmer to total 13.5 gallons, which left me with 1 hour of reserve for the round trip. I had nothing else in the plane--i.e., rear seats removed, just empty floor boards. Gross weight approx. 1,306 on departure.

Winds in Palmer and the Matanuska Valley were 15 Knots with gusts in the low 20's, coming from the East.

I arrived back to Carpenter creek at approx. 1030L and did one over-fly of the strip to ensure it was clear and winds/ground speed were appropriate. Gross weight at time of landing approx. 1,285. Terrain is a narrow box canyon, with 6-8,500 ft peaks surrounding. Width of valley is less the 1 mile at airstrip with rising terrain ahead of the go-around option. Airstrip is 500' of useable length, old river bottom of hard dirt/river rock/gravel, with many rough bumps throughout. 6'+ vegetation surrounding strip with no obstacles on either approach/departure end. Strip is one way. Land going up-stream, take-off downstream. Elevation at strip is 2,300' MSL.

I initiated a downwind at 400' AGL with 2 notches flaps, left base with 3' notches, and entered final on a 3deg glide slope with 4 notches @ 45MPH IAS. Ground speed indicated there was little to no wind from the tail, generally calm conditions.

I landed in a nice 3-point attitude at beginning of approach end with full aft stick. During rollout, I began hitting the large rough bumps as usual. The very last bump, approx 200' from the touch down point, I hit square on and the tail went to 90 deg before I could react with full throttle to attempt to blast tail down. In slow motion, I began making a straight over flip to the back.

Not wanting to be trapped, I opened clamshell doors while in the motion of flipping. I had my hand on my 3-point harness waiting to settle. As aircraft ceased motion on its back, I released restraint, egressed aircraft and ran a safe distance away.

When I realized there was no fire, I returned to aircraft, and ensured engine was secured. I heard my 406 ELT alarming, and turned it off. I contacted Alaska Air National Guard co-workers and Alaska RCC via Garmin In-Reach and advised there were no injuries and elected for a self-recovery.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I do not recall applying any brake as I have been in this strip nearly 15 times in the past month. I know its rough and dont use brake.

I was very empty and light in the tail. I should have added some ballast weight in the back to keep my CG aft upon landing/rollout.

With low fuel and sloshing upon slowdown, my CG perhaps shifted forward as well exacerbating the problem.
