Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Main rotor blades damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

1. The blade strike happened on 9/6/2019 at approximately 1350
2. Winds were blowing out of the Southwest at 10-15knots.
3. The helicopter was positioned approximately 30 yards East of the spot where they were unhooking the super sacks of gravel. I released my line to the north of the site where they unhooked the 9th super sack. I had just landed on the east side of our fuel drums to shut down and refuel.
4. The handlers names were [withheld] and an employee from [a construction company]. I can't recall his name.
5. I did not see the location of the empty super sack until I had my skids on the ground and was reducing my collective. By that time, It was within 15 feet West of my rotor tips, My helicopter was facing South.
6. The bag struck the main rotor on the advancing side of the main rotor towards the outboard portion of the blade. The helicopter was on the ground, collective fully down. The RPMs were still at 100%.
7. We discussed the ground crew cutting open the bags and them spreading the gravel in the hole while I held the bags airborne. I was instructed To start by just unhooking the bags on the ground and they were to be buried in the hole. On the first 7 sacks of gravel, we were putting in them directly in the hole to act as sand bags. On the 8th load, I set it down in the hole, they cut it open, I picked it back up, and we spread gravel around the hole. The ground handlers unhooked the bag after it was emptied and I flew off for another load. We repeated the process for the next load and it was time for me to fuel. After they released the sack, I backed up to the north of the site to release my line and hovered to the East side of the fuel drums and set down.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Ground handling crews need to be instructed to maintain a sterile landing environment, especially with external load operations as the pilot is often looking down to maintain vertical reference and isn't able to see the left side of the aircraft. Pilots need to be aware of possible loose items and maintain communication with their ground crews and stop the operation if it is not at all going according to the plan. Pilots and ground crews should have a clear understanding of how an external load operation is to go and clear, precise procedures in place for securing loose items and the landing zones.
