was working with an instructor learning this airplane. The power this airplane had was a surprise to me at this point. would more carefully add power. Seriously, I wouldn't be landing this Mooney Bravo on a soft field or be taking off from a soft field.

History of Flight

September 24, 2019

To: Kate Benhoff NTSB, and Dale Adams FAA,

This is my statement regarding the accident which happened at Chandler Municipal Airport on the morning of September 14, 2019 at approximately 8:05 am. I had been flying with James Price CFI since I purchased N1085W on 4/5/19 which is a 1990 Mooney TLS/Bravo conversion. We Departed CHD Chandler Municipal Airport shortly after 6 am and flew to Standfield VOR to practice approaches. We flew 2 ILS approaches and a VOR into Casa Grande airport, CGZ. I have been working with Mr Price to regain my instrument proficiency signoff and complete a BFR with this airplane at the same time. My BFR was done in a Piper Archer in January 2019 and I thought it would be good to have it with the Mooney Bravo. The final Approach that morning was into Chandler on the GPS 4R approach. Chandler airport is the home base for my airplane. I have a hangar there. The landing was uneventful. Another Takeoff was also successful after taxi back on 4L. We remained in the pattern and did a short field landing, stopped and taxied back. The final takeoff was to be a soft field takeoff which I had never done in this aircraft before but had done in other aircraft, then remain in the pattern and land coming to a full stop. I was cleared on runway 4L for takeoff with no delay by the tower controller. After taxiing onto the runway and centering the plane quickly, I applied power and pulled back on the yoke to raise the front tire gently from the surface. The back pressure on the yoke was in retrospect to abrupt for the power that this airplane had. It wasn't but 2 seconds later that the airplane began to fly in ground effect. The airspeed was about 10 kts slower than normal rotation speed. There was about a 9 to 10 KT crosswind at the 60 degree angle. At the airspeed it lifted off at I tried

ref

to bring the aircraft back into, or keep it in ground effect. I was unable to keep the plane effectively flying in ground effect and was struggling to keep runway heading. The airplane touched the runway abruptly several times in the process of trying to achieve flight. I was trying to keep the airplane from porpoising. The airplane was also being pushed off the left side of the runway by the cross wind and I knew if the tire hit the median it would be impossible to control. I thought I had established a small rate of climb but was just above stall. I put up the landing gear hoping I could increase the rate of climb and correct the airplane heading. All the while I was trying to maintain airspeed and correct heading. Ultimately I was too aggressive trying to have the airplane fly and caused a stall. The left wing hit the taxiway at the edge of the median and the airplane slid on the belly to just in front of the fuel tanks at Chandler. It seems like it took forever but in reality, it was only 5-7 seconds of time.

The occupants of the aircraft were unhurt, and no other airplanes or people were harmed. N1085W was damaged badly. Please let me know if there are any questions or items that should be included.

Thank you 7

R.Keith Farr N1085W
