Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Roy Stiner – Incident on September 16, 2019 in Lance 6887J at Gundy's Airport in Owasso, Oklahoma

Roy and 1 passenger, Wayne Jones, a retired commercial airline pilot in town for the day.

We left from the hangar at 11:15 A.M. We went to get gas for the plane. The Warrior (student lessons) was doing "touch and goes." We waited for some time. We did the "run-up," and we waited more. It was at least 11:45 A.M. before we were able to take off. (My wife says she believes it was more like 12:00 noon, as she was listening for us to take off.)

After the "run-up," I adjusted the instruments. In setting the heading bug on the "dg", it took an excessive amount of time due to the heat (maybe 10 minutes). When the instrument gets hot, the adjustment on the bug requires a lot of "pushing-in and turning" at the same time to get it to engage. That was the case here.

We took off without incident and toured the countryside for more than an hour. At the hangar we had approximately 30 gallons of fuel, and decided to put 15 more gallons in each tank, making a total of approximately 60 gallons – enough for at least 3.75 hours of flight. Plane uses 16.2 gallons per hour @ 65%.

We went over to Claremore, Oologah, Will Rogers home; Winganon Bridge, Garth Brook's house, and headed back to Gundy's.

We flew over the Port of Catoosa to get lined up, but went too far east. That threw me off. Then I tried to set up for a normal approach, but didn't get lined up correctly. I was too high and did a go-around. My next attempt failed also, and I did another go-around. I had 3 failed attempts; I couldn't get lined up.

On the last attempt, I was determined to land, but I was too high and too fast. I set down long; had the flaps in; attempting to stop I was skidding the tires and I couldn't keep it on the runway. One tire was off the runway. The surface was different with the paving. At that point, the paving was a few inches, maybe 8"-10" higher than the ground and grass adjacent to the paving. I was on the grass and headed toward some runway lights. I maneuvered around on the grass. Braking in the grass was negligible.

I went through the ditch and across 76th Street and came to a stop on the grass.

I believe the landing was at approximately 1:40 P.M.

It was very hot. I had ice water in the plane but forgot to drink it; I was surely dehydrated, which affected my performance.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Pilot should monitor more closely the effect of extended exposure to elevated temperature and the resulting dehydration. Don't let external happenings take your focus off flying the airplane.
