Crossed over midfield entered a left downwind for 21. Went downwind based to final. On final established on VASI. My power setting was 22-25. Indicating 115kts. I was instructing my passenger on how the VASI worked. Had the third red light blink and added 2in of manifold pressure. Reestablished on the VASI. Rode it down on very short final. My last check my indicated airspeed was a little over 115kts. The track on final was straight down the runway. Within seconds we were on the ground. The airplane just fell out of the air.

One of the employees on the field told me that a helicopter lifting off just before my landing had problems with the tail rotor (stall ?).

After a short time an airport employee and myself walked back to the impact site. I'm sure the wind was blowing on the runway 20knts or more. We walked less than 15' from the end of the runway at the point of impact, and the wind was calm. He and I walked back 15' to the runway and the wind was still blowing at 20knts. We did it again and experienced the same.
