Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Floats collapsed, float struts pushed into fuselage, left hand elevator partially removed, propeller tips damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On September 22 about 2:50 PM I was departing a tundra lake approximately 10 miles south of Mountain Village, AK with the intended destination of Bethel, AK. After back taxiing across the lake, I initiated the takeoff run and got the aircraft on step. At this point the take off was proceeding as expected and after accelerating on step I rolled the ailerons to the left and applied slight back pressure to the elevator to break water and become airborne. The aircraft did not become airborne however and believing the aircraft would fly with a little more acceleration, I continued the take off by releasing elevator back pressure to resume the best planing attitude (the "sweet spot") and then attempted to break water again. The aircraft did not break water and subsequently the floats impacted the shoreline and the aircraft became airborne momentarily before settling back on to the tundra. For a short period of time, the aircraft skipped across the tundra a number of times before reaching an area of rising terrain. The floats impacted the rising terrain, collapsed, and the aircraft came to a stop shortly thereafter in an upright position. I turned off all aircraft systems, assessed the well being of my passengers, and directed the passengers to evacuate the aircraft. Upon later inspection of the aircraft I observed the flaps in the fully retracted (0 degrees) position.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Pilot failed to maintain sterile cockpit environment resulting in a failure to complete the pre-takeoff checklist resulting in a failed take off attempt with the flaps up. Additional training is recommended with focus on ensuring sterile cockpit environment and proper checklist usage.
