Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Both main rotor blades and both tail rotor blades damaged, the empennage cracked all the way around likely damaging the drive shaft to the tail rotor, both skids are damaged, the windscreen is cracked and broken.

There may be additional damage that has not yet been detected.

No damage was done to property other than the aircraft.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The helicopter was built at the factory with factory assistance. It is an amateur built, experimental helicopter. A pilot at the factory performed test flights at the factory prior to delivering to my residence.

The flight which ended up in a crash was the first time I attempted to fly the aircraft. The intent of this flight was to go through start up, run up of the rotors, and pre flight system tests. After that my intent was to lift off 3 to 5 feet off the ground staying over the same spot. I would then set it down. There was no intention of leaving the small concrete square being used for take off and set down.

Normal start up and rotor run up procedures were followed. The collective was raised for a two stage pickup. When the helicopter was light on the skids, some right yaw was detected and corrected. When raising the collective further to initiate ascent, the helicopter left the ground and darted forward and left. I attempted to correct that movement and apparently over controlled the aircraft. The aircraft started swinging back and forth (the pendulum effect). I never had control of the aircraft after its skids left the ground. The helicopter was airborne for less than 10 seconds. It never reached an altitude greater than 5 feet AGL. It never was farther away from take off point than 20 yards. It hit the ground left (port) skid low and the main rotor blade hit the ground on the left (port) side of the helicopter.

The terrain is a flat area on my property. Wreckage distribution was in the immediate vicinity of the point of crash. Debris was not scattered.

Departure time was about 11 AM EDT from a concrete slab on my private property. (Coordinates are listed above). The intended destination was the same as the point of departure. (The intent was to pick it straight up 3 to 5 feet and set it back down.)
