Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to rt wingtip, rt aileron, rt outboard wheel half

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Scott and I were enjoying some landing re-currency in the KPRC traffic pattern for Rwy 21L. Scott was the pilot flying, I was PIC. Weather was clear and somewhat windy.

On our third or forth landing, with a crosswind from our right, Scott made a nice touchdown. He had both main wheels on the pavement with the tail of the Luscombe still in the air when we were hit by a wind gust from the right. At that point the airplane began to swerve right, and Scott corrected to the left.

He apparently over-corrected. The airplane began to swerve hard left. From the right seat I had no brakes, and Scott already had input full right rudder against the swerve. The airplane diverged off the pavement onto the grass adjacent to the runway, and the right wing-tip dragged on the ground, damaging it and the rt aileron. The outboard half of the rt wheel assembly was damaged.

There were no injuries. The airplane has been repaired and returned to service.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Tailwheel airplanes, specifically Luscombes, do have a reputation for much more frequent ground-looping than nosewheel airplanes. I'm afraid it's characteristic of the landing gear geometry. If I had had working wheel brakes on the right-seat pilot position I might have been able to stop the swerve.
