

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Fort Wayne State: IN

ZIP: 46825 Country: USA

Latitude: 41.148823 Longitude: -85.143821

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 09/20/2019 Local Time: 7:30-7:40PM
mm/dd/yyyy

Time Zone: EST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N212DX

Manufacturer: Diamond

Model: DA-20 C1

Serial Number: _____

Year of Manufacture: _____

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

- ☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 1214.8 lbs

Weight at Time of Accident/Incident: 1617.88 lbs

Number of Seats: 2 Flight Crew Seats: 1

Cabin Crew Seats: _____ Passenger Seats: 1

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Tail/vertical stabilizer was bent downward on aircraft, left wing was damaged due to tree impact upon touchdown. Minor damage to RH wing including aileron weight being broken, strobe light damaged and Front nose gear being ripped off.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Starting at 4:15PM I began preflighting N212DX following the checklist. Oil level was 5qts and fuel was at the bottom of the 1/2 mark on the diamond wood dipstick and the gauge also confirmed this and no water in tank when sumped. Everything on the aircraft checked out, I obtained weather data using AWOS 124.55 and ForeFlight and performed a passenger brief, taxing to RWY23 performing a full runup following the checklist for gauges, suction, mags ect- All green and departing RWY 23 at KSMD around 5:15PM with my first passenger Nick. Made a turn to the south picking up Flight following from Fort Wayne International(KFWA). Performed climb/cruise/decent checklists lean/rich mixture as trained. I made a circle around down town Fort Wayne on the south end before heading to the north and back to smith field(KSMD) for a midfield cross and left traffic approach for RWY23 landing. Upon landing, checked fuel quantity barely used 1/8 of the 1/2 in the tank. I shut down the aircraft and switched to another passenger whose birthday was 9/20/2019, Jessica received pre flight briefing and I taxied where I performed a quick runup checking gauges and suction-all green before departing RWY 23 with another AWOS approx 5:50pm for the same lap, obtaining flight following from KFWA and flying around down town Fort Wayne on the south end and back to the north returning to KSMD performing Midfield cross and left hand traffic to RWY 23, mixture was leaned and riched following the climb,cruise and decent checklists. Upon arriving at KSMD I shut down the aircraft and picked up the 3rd passenger Cheryl(Jessica's mom) and performed briefing and taxied to RWY 23, performed a quick runup checking gauges and suction-all green. I departed the 3rd time from KSMD around 6:25pm from RWY23 with fuel above 1/4 tank below 1/2 and new AWOS info. I departed to the south and picked up flight following from KFWA and circled downtown Fort Wayne on the south end before turning north of KSMD and heading back south for midfield cross and Left traffic for runway 23 at KSMD. Upon arriving back at KSMD I parked the aircraft on the ramp and shut down for 10-15 minutes as another aircraft was coming in on the ramp and unloading. I was talking to Shane Reidt (Jessica's boyfriend) who also wanted to go for a quick lap around before we all headed out to dinner. We spoke for a bit and I checked fuel gauge and noticed it was showing right above 1/4 tank (as seen from the cockpit picture Cheryl took as we arrived back at KSMD before Shane entered the aircraft. Me and Shane entered the aircraft and taxied to RWY 23 and I performed a runup checking all gauges and fuel pressure ect- all green. I gave a passenger brief and checked AWOS and we departed RWY23 around 7:10PM turning to the south and picking up Flight following from KFWA, I circled the south end of down town and turned north setting up for a midfield cross to runway 23. I entered the pattern on a 45 Left downwind midfield cross for 23 trimming for 80knots and performed my V-check as always, cruise flaps set pump on ect. I turned Left base pitching/trimmed for 70 knots full landing flaps. I began turning short final trimming for 60knots and all turns were done coordinated. As soon as I rolled out on final approach finalizing the trim settings and power, a few seconds later I heard 1-2 quick sputters from the engine, glanced over and did not see any gauges bouncing or moving, looked up again and saw the prop quit completely (no warning lights other then gen warning, no fuel lights no nothing). I was about to hit the fuel prime to do an air restart but the plane started sinking fast with the full flaps, I popped out the landing flaps to takeoff and the glide started to increase, I began setting up for an air restart again but the aircraft started to bank some to the right and drop again, I chose to pull out the takeoff flaps to cruise due to seeing some buildings and a set of power lines in front of me. Setting to cruise flaps seemed to extend the glide more and the plane felt a little more stable for control I was able to maintain control and saw a service road in between two businesses and was able to aim for that landing spot. My prime goal at this point was to successfully fly the aircraft to save those on board as I was trained. Upon getting down into the area I noticed the aircraft seemed to wide so I banked to miss the other trailers and dumpsters in the area, upon banking the right wing must have scraped the concrete road which in turn banked it back to the left causing it to seem to yaw some to the left. I felt both rear wheels touch for a moment but as this occurred the left wing struck a tree sheering most of the wing off, but the canopy remained to the right of the tree leaving myself (Scott A Garris and Shane Reidt) unhurt/unscathed and stopping the aircraft. We both unfastened seatbelts, and opened the canopy where he disembarked and I remained securing/shutting down the aircraft, fuel pump, keys, lights ect leaving the radios up as no fire, no smoke, or smell of fluids was present. I was able to contact KSMD on UNICOMM 122.8 and inform them of the accident, stating both of us were fine with no injuries and give them the location of the crash. I happened to look over at the fuel gauge at this time as I walked over to that side to pull the fuel shut off since I was out of the aircraft at that time in case of a fire, and the fuel gauge still was well above 1/8 tank at that time, no lights or other warnings were on. Paramedics, Fire, and Police all arrived and I shut off all the electronics on the aircraft. Accident time was approx 7:30-7:40pm depending on time of crash and time of contact to KSMD or authorities. I placed a call into 1800WXBRIEF and informed them of the accident.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I hope to gather the knowledge from this investigation to further learn what could have been done to prevent this if anything as I was being shown there was still plenty of fuel for at least 30 minutes if not more of extra flight time for VFR and should have been able to make a successful landing on RWY 23 at KSMD preventing this accident. I hope to use any knowledge learned to help coach anyone else on this particular instance.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
