Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> N677M suffered damage to the prop, cowl, wings, struts, rudder + fuselage V Brace. There was no damage to "other property"		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.		
At approximately 8:10 MDT, I departed KEVL in N677M as part of a flight of three, heading South in the general direction of the Onyiah Mountains for the purpose of a scenic flight. At Approximately 9:00 A.M., the flight decided to stop at the Josephine Ranch (2103) for a rest stop. Over flying the airstrip to check for cattle and/or other obstructions on the runway, the flight flew a left traffic pattern in trail for runway 32 as this would permit a landing without looking into the sun. The flight made one pass over the airstrip to confirm the landing environment was clear without landing and to confirm the wind → sock was dead. Upon confirmation the flight began touching down with my aircraft #3 for landing. After the other two aircraft in my flight landed without incident, I set up a stabilized Approach for 32 with all aspects of the approach normal. Executing a wheel landing to maintain forward visibility, I noticed at touchdown that I was skidding on a thin layer of frost over dirt. Applying the brakes, I maintained directional control on the runway		

RECOMMENDATION (How could this accident/incident have been prevented?)			
Operator/Owner Safety Recommendation Transitioning from the frost covered portion of the runway to the dry gravel portion, I speculate that I was unaware of the excessive braking pressure I had applied as the aircraft skidded on the frost. It is entirely possible/probable, that I had in fact locked up the brakes while on frost unnoticed until I transitioned onto the dry surface. In hindsight, I should have gotten off the brakes completely as the landing speed decreased to virtually zero and rolled out with more than 1000' of runway remaining. The fact that I committed in my mind to stopping where I did was in large part predicated by where the other two aircraft in my flight had pulled off the runway. I also could have landed in a 3 point configuration.

Continued from page 7

centerline and was rolling out normally with no indication of problems. At the end of my rollout, I transitioned from a frost covered surface to that of dry gravel. It is the opinion of this pilot, that the braking pressure I applied to maintain directional control on the frost covered portion of the runway was excessive for the dry portion. Having almost come to a complete stop and still rolling at approximately "walking speed" with the tail up, the aircraft tilted forward the center of gravity striking the prop and then coming over the top to land on its back in slow motion.

Pilot Error.

No Injuries were sustained by the pilot.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
