DAMAGE TO AIRCRAFT AND OTHER PROPERTY

Aircraft Damage

- ☐ None ☒ Substantial
☐ Minor ☐ Destroyed
 ☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Bent Rotor Mast, Bent Rotors, Tail Destroyed, Prop Damaged, scratches to gyro body

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Accident happened upon landing on airport runway. The time was mid morning and weather conditions were good.

Accident was caused by pilot error... I was about to set the gyroplane on the runway but felt I might be a little too high yet. To cushion the landing I forced the nose up and gunned the engine a couple of times (this is a common technique used by gyro pilots).

The torque from the engine cause the gyro to turn right & which I corrected with hard left rudder. The thrust however accelerated my landing speed. Be cause the front wheel steering & the rudder are directly connected, the front wheel was now turned all the way to the left and when it finally touched the runway the gyro turned violently to the left & tipped to the right. Best gess of speed is 16 mph.

I was a bit shaken at the time and don't remember any services obtained. Spectators @ the airport rushed out on foot (it is a very small airport) & helped me to exit my gyro. Several helped me push my plane to a hangar & several more formed a line & walked the runway where I had landed looking for debris or anything that might hinder further take offs or landings.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This accident was caused by pilot error, and many Tango Gyros are flown safely every day - Having said that, I would recommend that if possible, this gyro be designed with a castoring front wheel so ~~that~~ that no matter how far one pushes the rudder, the front wheel always aligns immediately with the direction of travel as it touches the ground.

I know several different gyros are designed to have their front wheel do just this but perhaps this gyro would be unsteerable while taxiing.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
