Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft is sitting upright, on top of floats, left wing tip on ground and right wing tip in air, with floats detached. Both floats have holes ripped in the metal. Float struts are mostly detached from airplane, and associated rigging and flying wires are broken. Left wing strut is broken.. Both left and right wing root attachments have wrinkled skin. Propeller blade is slightly bent.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I departed Karluk Portage on the Karluk River near Larsen Bay Alaska at 1357 AKD. Terrain is a wide flat river valley with mountains on the outskirts. Winds were light and blowing downriver. I took off upstream. Aircraft was empty and I was the sole occupant. I climbed up to 2500' and headed direct to Ayakulik River. Upon arrival over the landing zone, I circled and evaluated the wind as light and variable, the landing zone on the river was glassy. I decided to land downriver. From the downwind leg I turned left into the base leg and transitioned via an oval pattern into final approach. As I was rolling the wings level and starting to level my pitch attitude and set up a glassy water landing attitude, I felt the forward part of the left float touch the water which was then followed by an immediate uncontrolled yaw to the left. The aircraft went up the bank of the river and slid across the tundra hitting several bumps before coming to a stop. I was unhurt, shut off the fuel and master switch. I exited the aircraft and called for help on the Satellite phone. The time was approximately 14:20 AKD.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This accident could have been prevented by flying a pattern that would allow a longer straight in final where an appropriate glassy water landing pitch attitude could be established earlier and at a higher altitude. This would mitigate the risk of the forward section of the float coming into contact with the water before the pilot intended.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
