NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Cessna N50816 is a 150 J with a maintenance history of an engine failure in February 2007 when my nephew Paul Adamson was the pilot. Subsequently it has been in for extensive maintenance and repair since that time. Ugalde Aviation completed the work in March 2019. Since then I have sporadically flown the airplane; mostly pattern work totaling about 10 hrs. I had planned to use the airplane as my vehicle to return to active flying.

October 7th was a beautiful day, I had planned a 30-45 minute local sight seeing flight in the 1968 Cessna 150J after work.

My pre-flight inspection revealed nothing unusual, and 6 quarts of oil were indicated on the dip stick.

The Flight Controls, Run-up, Mag check, Oil temp and pressure were all normal.

There was an Indicated ½ Tank of fuel on both sides so I took off from the Fallon Municipal Airport about 6:30 PM.

I made a loop by flying West over the Lahontan Dam and returning back toward Fallon over the Silver Springs airport. It had become dark during my return flight. I announced my position and intention to land Via Runway 21 on the Fallon Municiple Airport CTAF. There was no other apparent traffic.

I was making Right hand traffic for Rnwy 21 when the engine quit as I banked Right onto the Base leg . There was no sputtering or warning when the prop began windmilling. I simultaneously radioed Mayday with my position several times, Checked the mixture, the shut-off valve, rocked the wings, and attempted restart.

When I scanned the instruments I still had at least ¼ tanks of fuel on both sides, I still had electrical power and the radios appeared to be working. I called Mayday quickly several more times and then it was obvious I was not going to make the runway. All of my attention was then on just flying the plane and trying to control how we would contact the desert. The airplane landed flat and had significantly slowed down before the nose wheel dug in causing the plane to flip over. After we got out of the airplane and determined we were not injured, I continued to use a hand held radio calling for help. Additionally, the ELT appeared to be transmitting so we sat on the wing and waited. NOBODY came to help. It was cold, dark and the coyotes were howling. Consequently we decided to walk out of the desert toward the airport. By the time we marched out of the desert back to the airport it was late, we were exhausted and since nobody was looking for us we decided to report it in the AM.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Assuming this accident was fuel related:

- 1) The reason for the engine failure in 2007 was a clogged fuel line: From what ?
- 2) Always top off the tanks before flying
- 3) Visually with a stick or other means check the fuel level.
- 4) Pay attention to engine run time and fuel burn rate, then check to see if it correlates to what the fuel gauges indicate.
- 5) Never trust fuel gauges alone. I believe they are only accurate at Zero.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No
