Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

All structural parts damaged with the possible exception of the left wing.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

After a morning brunch at UT25 in Monument Valley with a fly-in group of about 10 similar light sport aircraft, the group began taking off serially around 10:45 am. The weather was clear but breezy with a quartering tailwind from the southeast at about 10 knots with gusts to 20. Runway 34 was a slightly downhill run, and it was quite narrow with culverts and berms on both sides. I took off as the 4th plane in sequence and rotated normally at 50 knots. As soon as the wheels left the pavement the tail was pushed to the left by the tailwind. I straightened the tail and maintained wings level flight, but the plane was drifting left and because of the cross/tailwind and high altitude we were getting very little lift. We contacted sandy terrain left of the runway in more or less wings level attitude.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Rather than departing on a schedule, it would be better to wait and watch the windsock for a break in the crosswind, as the wind there can be wildly variable.

Given the takeoff conditions, it would have been better to stay on the runway for a 10 knot higher rotation speed.

On rotation, right aileron should already be cranked in to meet the crosswind.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

Other Services, if Any, Prior to Departure**EVACUATION OF AIRCRAFT**

Was an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location

The pilot side door was crushed inward. The passenger opened their door and crawled out. I unbuckled my seat harness and was struggling with my legs and feet to get free. Gasoline began pouring on both of us as the passenger reached back in and pulled me (the pilot) out across the seats. It was difficult to position my feet so they could slide out and that delayed us a few seconds. We crawled free in about 1 minute, soaked in gas. Fortunately there was no fire.
