Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The power lines cut the suspension cables by the pilot compartment. A fire caused damage to the wicker basket after landing. No damage to the balloon or any other property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 10-19/2019 at 0715 hours, I lifted off from La Orilla and Coors with 12 passengers in my balloon. We flew down into the Rio Grande River and then up to just under 10,000 feet MSL. I flew to the east side of Albuquerque and I began to come down to an area where I could land. This was a fairly quick descent of approximately 800 feet per minute. The balloon rotated around as I came down and I slowed the descent as we came down right above the buildings. As I rotated the balloon, so I would be in the front facing the direction of travel, there was a line of trees ahead of me. As I ascended up over the trees I saw a power line directly in my flight path about 20-30 feet away. The balloon was slowly ascending toward the power line at about 100 feet per minute and I knew at this point that there was no way I could avoid contact with the power line. This was approximately 50 minutes into the flight. I yelled at the passengers, "Powerline! Everybody get down!" I quickly turned off the propane on the side of the basket that was going to hit the lines so if the propane line was cut, it wouldn't spray fire everywhere. I then reached across and activated the burners on the opposite side in an attempt to get the balloon to rise enough so the powerline would not be able to make contact with the support cables.

The balloon did make contact with the powerline, just above the leather bolster, causing a huge explosion and a large amount of heat. The contact with the power line cut through the metal support cables on one corner of the basket in the pilot compartment, making the basket lean heavily to the unsupported corner. The loss of those support cables freed the basket from the powerline and the balloon began to ascend again. I was barely able to reach the vent lines and the burner but I was able to slow the ascent and was able to use the remaining burner to slow the descent down for a soft, safe landing in a parking lot. As I descended into the parking lot there was smoke coming from the bottom side of the wicker basket. Once the balloon was stopped and the Rapid deflation top was activated, I used my handheld fire extinguisher to put out the possible fire. One of the passengers said they could see flames coming from the basket so I had all of the passengers exit the balloon. A truck had pulled into the parking lot that had several small fire extinguishers that we used to finally put out the fire.

I checked with the passengers and they advised me that there were no injuries. The fire department responded and put more water on the burned area of the wicker basket to assure the fire was out.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

This situation is a direct result of my failure to observe a large high voltage powerline above a residential area. I did not experience any wind shears or downdrafts that may have attributed to this situation. I should have seen the powerlines prior to dropping down below tree level.
