Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left side of the leading edge of stabilator was impacted by the bird. Stabilator was dented and a few rivets were missing.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departure Time: 1332

Departure Location: KMLB

Services: N/A

Intended Destination: KLEE

Description: On an instructional instrument cross country flight, while cruising at 4000 ft, we got into a cloud where a flock of large black birds were circling. They all dove down and one hit the leading edge of the stabilator. We disengaged the autopilot and manually took control of the aircraft. The aircraft was able to maintain straight and level with no issues and a slight climb and descent were attempted to verify the aerodynamic effects were not adverse. They were not and we elected to turn around and land back at KMLB.
