Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left Main, and Nose gears sheared off. Right main gear partially forced into well. Left wing bent in middle. Pitot tube hanging off wing. All propeller blades bent. Small hole punctured in rear left of nose section. Various scores in runway surface.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departure around 1945 Local time at Opa Locka Airport (OPF) with an intended route to the practice area to the northwest, and landing practice planned at OPF. Aircraft fuel was full.

Preflight brief, including positive exchange of flight controls, start up, taxi briefings, and normal procedures for taxi were accomplished. Upon Completion of run up at taxiway H, takeoff was briefed, and engine failure on runway scenario was briefed. Student obtained further taxi clearance, requesting a northwest departure, and we continued taxi to runway 9L via N. I took control of the radios and got takeoff clearance from tower. Student completed final pre-takeoff items. Once aligned with runway, student slowly applied full power. Once the aircraft reached full power, I cut the power lever on the left engine, to simulate an engine failure. Student became confused by sudden left yaw, did not react, and kept the aircraft in an accelerating left yaw down the runway. I repeatedly said "abort" "abort." I was unable to apply brake myself due to a lack of brakes on instructor side. (Brakes only installed on left side.) Student now panicking and confused, returned idle power lever to full position. Left yaw stopped, and aircraft now accelerated at an angle toward left edge of runway. I loudly said "my controls" student, panicking, remained locked on controls applying back pressure. I continued to loudly repeat "my controls" "my controls." Aircraft ascended into ground effect at a slow speed when student relinquished controls. I now had the controls, but was unable to control the aircraft with stability. As aircraft approached the ground, I returned both thrust levers to idle, right as the aircraft impacted the ground in a left yawing, slight left bank attitude., when i believe the gear collapsed. The aircraft skidded on the surface toward the left edge of the runway in a counterclockwise rotation, coming to a stop at the grass line.
