Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Two upper aft longerons and left wing tip cracked

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Aircraft was hangared at KHRJ (Harnett Regional Airport).

Preflight was normal and presented all checking OK. Started engine normally at approx. 4:00 pm local time, and warmed up for about 15 minutes. Called for radio check and an Army Apache helicopter flying pattern traffic, confirmed comms loud and clear.

Taxied to RWY 5 being used by traffic, winds were calm (very light breeze from 060 degrees approx.) and did run-up holding short of RWY 5. All OK. Army Apache helicopter flew a very slow forward speed final on Rwy at approx 100ft AGL. When it cleared the RWY, a high wing Cessna single landed fine on RWY 5. When it cleared the RWY I attempted take-off on RWY 5 aligning with center line and progressively applying full power.

When my airplane's tail went up, the airplane did a small short bounce aligned with the RWY but it immediately swerved hard right facing a line of trees to the right side of the RWY, and I applied full left rudder attempting to correct and the airplane started slowly turning left but it came down a grass bank and ended resting against bushes on the bank.

I switched single magneto off, fuel valves off (right and left tanks), radio off, and exited the airplane from the right-hand side (combination door/window like a Piper Cub).

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Apply power in a more slow mode and see how airplane responds to P-Factor right turning tendency produced by VW engine -without VGs installed on wings stabilizer- during a couple of high speed taxis before actual take-off attempt .

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
