

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Simsbury State: CT

ZIP: 06070 Country: USA

Latitude: N 41:54.8 Longitude: W 72:46.68

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 11/23/2019 Local Time: 0845

mm/dd/yyyy

Time Zone: EST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N5776W

Manufacturer: Piper

Model: PA-28

Serial Number: 28-1611

Year of Manufacture: 1964

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: Cherokee B 150

☐ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 2150 lbs

Weight at Time of Accident/Incident: 1799 lbs

Number of Seats: 4 Flight Crew Seats: 2

Cabin Crew Seats: 0 Passenger Seats: 2

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Explosion at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The airplane is completely totaled. The left wing and left landing gear tore off the airframe completely. The rudder, elevator, and right wing are severely damaged and crumpled. The cabin windows and doors took heavy damage as well. Fuselage has dents, cracks, and damage in several areas.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

My student (Michael McFarren) and I (Jacob Pohl) had a scheduled training flight in N5776W (PA28-150). Our plan was to depart Simsbury (4B9) around 7:30am to practice landings at Robertson (4B8) since the runway is a bit longer and wider than at Simsbury. We departed Simsbury as planned and headed over to Robertson for some rather uneventful landing practice. Around 8:20am, we decided to leave Robertson and return to Simsbury for a couple of additional landings. The portion of the flight back to Simsbury was also uneventful. The wind sock was favoring runway 3 at Simsbury, so we decided to set up to land for that end of the runway. We made the landing uneventfully.

Because of the length of the runway at Simsbury, our school does not allow touch-and-go landing practice at Simsbury. With this in mind, after my student made the initial landing back into Simsbury from Robertson, my student made a radio call on the Simsbury CTAF (122.7) that he was back taxiing to Runway 3 to takeoff for closed traffic. We took off uneventfully using short field takeoff procedures. We proceeded to fly the standard left hand traffic pattern for 4B9, announcing our position on the CTAF frequency each leg of the pattern, including final. By the time we turned on the final leg of the pattern for runway 3, we were at 400AGL with the flaps fully extended to 40 degrees, and flying at the published approach speed of 85mph (all speeds for N5776W are published in mph rather than knots). A normal approach path and approach speed was maintained throughout our descent to the runway. My student executed the flare to landing appropriately with the power idle, touching down a couple hundred feet before the intersection with the taxiway. My student touched down on the runway approximately 10 knots above stall speed.

Shortly after touchdown, the nosewheel came down onto the pavement and my student began applying brake pressure. At this point, we were roughly within 100 feet of the intersection with the taxiway. It wasn't until this point when both my student and I saw the car driving down the taxiway in my periphery on the left. If I had to guess, the car was going about 25mph. By then, it was impossible to make any evasive maneuver or to execute a go-around. The car failed to stop/hold short of the runway and continued driving to cross the runway. As it entered onto the runway, the left wing struck the car on the passenger side of the car. The striking of the wing on the car caused the airplane to flip upside-down and skid down the runway upside-down. We skid down the runway a couple hundred feet or so. When the plane came to a stop, our seatbelts kept us to our seats. My student and I carefully unbuckled in order to exit the airplane. A witness of the accident (Art Utay) assisted us in exiting the airplane by helping us get the door open (only one door on the right seat side of the airplane). Eventually, I was able to kick the door open and exit the airplane safely along with my student. Upon exiting, I pulled the mixture to idle cutoff, ensured the avionics, fuel pump, and battery master switches were turned off, and turned the magnetos off to reduce the probability of a fuel leak causing a fire or the possibility of an electrical fire. No such fire occurred. The driver was also not injured. Shortly after exiting the airplane, the police and fire department showed up. The airport manager and Steve Smith were also contacted about the events that unfolded and the airport was subsequently closed.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

It is recommended that cars that intend to cross the runway in order to get to the hangers on the other side use a handheld radio to broadcast their intentions to do so on the CTAF frequency. This could have helped the driver of the car hear where we were in relationship to them since my student appropriately made all calls on the CTAF frequency for each leg of the traffic pattern. Also, if the driver had broadcasted his intentions to cross the runway, our situational awareness would also be enhanced. When landing from the runway 3 side of the airstrip, it is near impossible to see oncoming cars on the taxiway since the hangers block the taxiway from view. This would have helped us anticipate his presence before he failed to hold short of the runway for the landing traffic (me and my student).

N/A

EVACUATION OF AIRCRAFT**Was an emergency evacuation of the aircraft performed?** ☒ Yes ☐ No**Method of Exit** – Describe how the occupants exited and how many occupants evacuated each location

We were hanging upside down from our seatbelts. We unfastened our belts and were able to kick the door open with the help of a witness of the accident. We then both proceeded to exit the aircraft safely, making note of the locations of broken glass. Afterwards, I quickly secured the aircraft with assistance from a witness to the accident, Art Utay. I am not sure, if by definition, this is an emergency evacuation since no emergency was declared (no mechanical failures prior to the accident), but I figured I would at least briefly describe

OTHER AIRCRAFT – COLLISION (If air or ground collision occurred, complete this section for other aircraft)**Aircraft Registration Number****Manufacturer:** _____**Model:** _____**Damage to Other Aircraft**☐ Destroyed☐ Minor☐ Substantial☐ None**Registered Owner of Other Aircraft**

Name: _____

City: _____

State: _____ ZIP: _____

Country: _____

Pilot of Other Aircraft

Name: _____

City: _____

State: _____ ZIP: _____

Country: _____

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

1. I left Michael's student pilot certificate number out of this report since it has not yet been issued to him. I processed his application for a student pilot certificate several weeks ago, but he has still not yet received his permanent certificate in the mail. For this reason, I am unable to know his certificate number, and thus left it out.
2. The reason Michael has such a high estimated total time for a student is because he received substantial flight training back in the 1980s and 1990s. He never completed his private pilot certificate at that time. He has since resumed, and to some degree, restarted, his flight training these past few weeks.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE**Date of this Report**11/27/2019*mm/dd/yyyy***Name of Pilot/Operator:** Jacob Pohl**Signature:** _____
